Baresi,Schahram Dustdar,Harald Gall,Maristella Matera,2005-03-01 Over recent years most business processes have

changed in various dimensions e.g. exhibility, interconnectivity, coordination style, autonomy due to market conditions, organizational models and usage scenarios of information systems. Frequently information is relocated within a geographically distributed system according to rules that are only seldom defined as a well coded business process. This creates the need for a software infrastructure that enables ubiquitous mobile and collaboration systems. UMICS: The anywhere, anytime, any means paradigm is becoming the major challenge in conceiving, designing and releasing next generation information systems. New technologies like Wi networks and 3rd generation mobile phones are offering the infrastructure to conceive of information systems as ubiquitous information systems, that is, systems that are accessible from anywhere at any time and with any device. Ubiquity is not yet another buzzword pushed by emerging technologies but is mainly a means to support new business models and encourage new ways of working. This new wave of UMICS will exploit the knowledge developed and deployed for conventional information systems but will also need new concepts, models, methodologies and supporting technologies to fully exploit the potentials of the enabling infrastructure and to be ready for the challenge. Moreover, people need to move across organizational boundaries and collaborate with others within an organization as well as between organizations. The ability to query the company's distributed knowledge base and to cooperate with co-workers is still a requirement but mobility brings new access scenarios and higher complexity.
