Ecology and Power in the Age of Empire Corey Ross,2017-03-31 *Ecology and Power in the Age of Empire* provides the first wide ranging environmental history of the heyday of European imperialism from the late nineteenth century to the end of the colonial era It focuses on the ecological dimensions of the explosive growth of tropical commodity production global trade and modern resource management transformations that still visibly shape our world today and how they were related to broader social cultural and political developments in Europe s colonies Covering the overseas empires of all the major European powers Corey Ross argues that tropical environments were not merely a stage on which conquest and subjugation took place but were an essential part of the colonial project profoundly shaping the imperial enterprise even as they were shaped by it The story he

tells is not only about the complexities of human experience but also about people's relationship with the ecosystems in which they were themselves embedded the soil water plants and animals that were likewise a part of Europe's empire Although it shows that imperial conquest rarely represented a sudden bout of ecological devastation it nonetheless demonstrates that modern imperialism marked a decisive and largely negative milestone for the natural environment By relating the expansion of modern empire global trade and mass consumption to the momentous ecological shifts that they entailed this book provides a historical perspective on the vital nexus of social political and environmental issues that we face in the twenty first century world

will find their collective voice and stand up for their rights that they will cease to be invisible and voiceless in America
