The Tender Ship Governmental Management Of Technological Change:

The Tender Ship SQUIRES,2013-03-14 Unsurprisingly Arthur Squires presents us with a remarkable book Unsurprisingly because this is a remarkable man accomplished engineer gifted musician sensitive humanist talented teacher analytical observer felicitous writer altogether a man with the kind of breadth and depth that we rarely produce these days and even more rarely tolerate in an age that worships specialization Professor Squires has done a great many things in his life and has thought deeply about his experiences The book that follows radiates not only that ongoing process of reflection but also a dazzling range of reading and a lifetime of conversations with colleagues and bosses mentors and students wise men and fools What he has produced is that rare specimen indeed a book that is a pleasure to read and that needs to be read by every informed citizen The Tender Ship focuses on the intersection of the most vital questions that confront American society or indeed any modern industrial society however defined No historical example exists of a society that has reached such a status without creating bureaucracies to manage its public and private sectors Maintenance of national well being depends at least in part on a nation s ability to generate and adopt the technology necessary to maintain economic competitiveness and in the case of the United States a credible force with which to defend ourselves and our allies

Openness to Creative Destruction Arthur M. Diamond,2019 Life improves under the economic system often called entrepreneurial capitalism or creative destruction but more accurately called innovative dynamism Openness to Creative Destruction Sustaining Innovative Dynamism shows how innovation occurs through the efforts of inventors and innovative entrepreneurs how workers on balance benefit and how good policies can encourage innovation The inventors and innovative entrepreneurs are often cognitively diverse outsiders with the courage and perseverance to see and pursue serendipitous discoveries or slow hunches Arthur M Diamond Jr shows how economies grow where innovative dynamism through leapfrog competition flourishes as in the United States from roughly 1830 1930 Consumers vote with their feet for innovative new goods and for process innovations that reduce prices benefiting ordinary citizens more than the privileged elites Diamond highlights that because breakthrough inventions are costly and difficult patents can be fair rewards for invention and can provide funding to enable future inventions He argues that some fears about adverse effects on labor market are unjustified since more and better new jobs are created than are destroyed and that other fears can be mitigated by better policies The steady growth in regulations often defended on the basis of the precautionary principle increases the costs to potential entrepreneurs and thus reduces innovation The Great Fact of economic history is that after at least 40 000 years of mostly poor nasty brutish and short humans in the last 250 years have started to live substantially longer and better lives Diamond increases understanding of why

Resilience Engineering Perspectives, Volume 2 Erik Hollnagel,Christopher P. Nemeth,2016-12-05 Preparation and Restoration is the second volume of Resilience Engineering Perspectives within the Ashgate Studies in Resilience Engineering series In four sections it broadens participation of the field to include policy and

organization studies and articulates aspects of resilience beyond initial definitions Policy and Organization explores public policy and organizational aspects of resilience and how they aid or inhibit preparation and restoration Models and Measures addresses thoughts on ways to measure resilience and model systems to detect desirable and undesirable results Elements and Traits examines features of systems and how they affect the ability to prepare for and recover from significant challenges Applications and Implications examines how resilience plays out in the living laboratory of real world operations Preparation and Restoration addresses issues such as the nature of resilience the similarities and differences between resilience and traditional ideas of system performance how systems cope with varying demands and sometimes succeed and sometimes fail how an organization s ways of preparing before critical events can enable or impede restoration the trade offs that are needed for systems to operate and survive instances of brittle or resilient systems how work practices affect resilience the relationship between resilience and safety and what improves or erodes resilience This volume is valuable reading for those who create and operate systems that must not only survive but thrive in the face of challenge **Science in Flux** Mark D. Bowles,2006 *Memorial Tributes* National Academy of Engineering,2014-09-24 This is the 18th Volume in the series Memorial Tributes compiled by the National Academy of Engineering as a personal remembrance of the lives and outstanding achievements of its members and foreign associates These volumes are intended to stand as an enduring record of the many contributions of engineers and engineering to the benefit of humankind In most cases the authors of the tributes are contemporaries or colleagues who had personal knowledge of the interests and the engineering accomplishments of the deceased Through its members and foreign associates the Academy carries out the responsibilities for which it was established in 1964 Under the charter of the National Academy of Sciences the National Academy of Engineering was formed as a parallel organization of outstanding engineers Members are elected on the basis of significant contributions to engineering theory and practice and to the literature of engineering or on the basis of demonstrated unusual accomplishments in the pioneering of new and developing fields of technology The National Academies share a responsibility to advise the federal government on matters of science and technology The expertise and credibility that the National Academy of Engineering brings to that task stem directly from the abilities interests and achievements of our members and foreign associates our colleagues and friends whose special gifts we remember in this book **The Drama of the Commons** National Research Council,Division of Behavioral and Social Sciences and Education,Committee on the Human Dimensions of Global Change,2002-03-15 The tragedy of the commons is a central concept in human ecology and the study of the environment It has had tremendous value for stimulating research but it only describes the reality of human environment interactions in special situations Research over the past thirty years has helped clarify how human motivations rules governing access to resources the structure of social organizations and the resource systems themselves interact to determine whether or not the many dramas of the commons end happily In this book leaders in the field review the evidence

from several disciplines and many lines of research and present a state of the art assessment They summarize lessons learned and identify the major challenges facing any system of governance for resource management They also highlight the major challenges for the next decade making knowledge development more systematic understanding institutions dynamically considering a broader range of resources such as global and technological commons and taking into account the effects of social and historical context This book will be a valuable and accessible introduction to the field for students and a resource for advanced researchers

Air Force Disappointments, Mistakes, and Failures Kenneth Werrell,2024-06-18

While successful developments in aviation receive considerable attention the projects that failed or otherwise did not live up to expectations receive far less if any scrutiny Typically unsuccessful efforts are briefer in duration and have a less visible paper trail Thus while the literature is rich in success stories we tend to forget or simply bury our failures And as one observer has suggested that there were failures mistakes and wrong turns reminds us that progress is not inevitable that acknowledged error can be as instructive as success and that roads not taken impose a price all their own Here author Kenneth P Werrell tells of a race to overcome obstacles politics resources competing technologies timing in the quest to deliver quality if not war winning machinery The focus of Air Force Disappointments Mistakes and Failures 1940 1990 is on aircraft e g bombers fighters transports and missiles e g cruise missiles standoff missiles ballistic missiles surface to air missiles air to air missiles An intelligence system is also evaluated These case studies give the context and details of the development testing and as appropriate operational service Highlighting the problems and criticisms of these systems then provides an opportunity to determine what went wrong The reasons for the failures of these systems vary from the obvious money delays technical problems to more complex reasons such as the foe s reaction politics new technologies and timing The tale of these disappointments is a heretofore untold story These projects in which the US Air Force stumbled are outliers within the overall success of the service and fortunately its successes outnumber the failures

Circulating Fluidized Bed Technology P. Human Error in Aviation R.Key Dismukes,2017-07-05 Most aviation accidents are attributed to human error pilot error especially Human error also greatly effects productivity and profitability In his overview of this collection of papers the editor points out that these facts are often misinterpreted as evidence of deficiency on the part of operators involved in accidents Human factors research reveals a more accurate and useful perspective The errors made by skilled human operators such as pilots controllers and mechanics are not root causes but symptoms of the way industry operates The papers selected for this volume have strongly influenced modern thinking about why skilled experts make errors and how to make aviation error resilient

The ^AOrigin and Evolution of Cultures Robert Boyd,Peter J.

Richerson, 2005-01-20 Oxford presents in one convenient and coherently organized volume 20 influential but until now relatively inaccessible articles that form the backbone of Boyd and Richerson's path breaking work on evolution and culture. Their interdisciplinary research is based on two notions. First that culture is crucial for understanding human behavior unlike other organisms socially transmitted beliefs, attitudes and values heavily influence our behavior. Secondly culture is part of biology the capacity to acquire and transmit culture is a derived component of human psychology and the contents of culture are deeply intertwined with our biology. Culture then is a pool of information stored in the brains of the population that gets transmitted from one brain to another by social learning processes. Therefore culture can account for both our outstanding ecological success as well as the maladaptations that characterize much of human behavior. The interest in this collection will span anthropology, psychology, economics, philosophy and political science.

Handbook of Cognitive Task Design Erik Hollnagel, 2003-06-01 This Handbook serves as a single source for theories, models and methods related to cognitive task design. Conceptual Foundations for Multidisciplinary Thinking Stephen Jay Kline, 1995-01-01 Our current intellectual system provides us with a far more complete and accurate understanding of nature and ourselves than was available in any previous society. This gain in understanding has arisen from two sources: the use of the scientific method and the breaking up of our intellectual enterprise into increasingly narrower disciplines and research programs. However we have failed to keep these narrow specialties connected to the intellectual enterprise as a whole. The author demonstrates that this causes a number of difficulties. We have no viewpoint from which we can understand the relationships between the disciplines and lack a forum for adjudicating situations where different disciplines give conflicting answers to the same

problem We seriously underestimate the differences in methodology and in the nature of principles in the various branches of science This provocative and wide ranging book provides a detailed analysis and possible solutions for dealing with this problem

Fast Fluidization ,1994-12-23 Over the last decade circulating fluidization or fast fluidization has developed rapidly superseding standard bubbling fluidization in many applications for example fast fluidization provides a better means for controlling emissions from the combustion of high sulfur fuels and excels when used in boilers in steam plant and power stations China initiated the study of fast fluidization in the early 1970s Focusing on the substantial research cultivated in that country with Kwauk at the leading edge this latest volume in the Advances in Chemical Engineering Series is written in the context of the international state of the art and addresses some of the most vital issues surrounding this fluidization method

Design Paradigms Henry Petroski,1994-05-27 From ancient Greek temples to twentieth century towers engineers have learned more about design from failure than success The concept of error according to the author is central to the design process As a way of explaining the enduring aspects of engineering design he relates stories of some of the greatest engineering successes and failures of all time These case studies drawn from a wide range of times and places serve as paradigms of error and judgment in engineering design By showing how errors were introduced in the design process and how they might be avoided the book suggests how better quality and reliability might be achieved in designed devices structures and systems of all kinds Clearly written with striking illustrations the book will appeal to engineering students practising engineers historians of science and technology and all those interested in learning about the process of design
