The Upcycle Beyond Sustainability Designing For Abundance:

The Upcycle William McDonough, Michael Braungart, 2013-04-16 From the authors of Cradle to Cradle we learn what's next The Upcycle The Upcycle is the eagerly awaited follow up to Cradle to Cradle one of the most consequential ecological manifestoes of our time Now drawing on the green living lessons gained from 10 years of putting the Cradle to Cradle concept into practice with businesses governments and ordinary people William McDonough and Michael Braungart envision the next step in the solution to our ecological crisis We don't just use or reuse and recycle resources with greater effectiveness we actually improve the natural world as we live create and build For McDonough and Braungart the questions of resource scarcity and sustainability are questions of design They are practical minded visionaries They envision beneficial designs of products buildings and business practices and they show us these ideas being put to use around the world as everyday objects like chairs cars and factories are being reimaged not just to sustain life on the planet but to grow it It is an eye opening inspiring tour of our green future as it unfolds in front of us The Upcycle is as ambitious as such classics as Rachel Carson's Silent Spring but its mission is very different McDonough and Braungart want to turn on its head our very understanding of the human role on earth Instead of protecting the planet from human impact why not redesign our activity to improve the environment We can have a beneficial sustainable footprint Abundance for all The goal is within our reach

Responsible Management and Taoism, Volume 1

Liangrong Zu,2023-12-14 As the world grapples with the complexities and uncertainties of the VUCA volatile uncertain complex and ambiguous era it has become imperative to explore new approaches that align with responsible management and Taoist principles *Routledge Handbook of Sustainable Product Design* Jonathan Chapman,2017-05-08 As a cultivated form of invention product design is a deeply human phenomenon that enables us to shape modify and alter the world around us for better or worse The recent emergence of the sustainability imperative in product design compels us to recalibrate the parameters of good design in an unsustainable age Written by designers for designers the Routledge Handbook of Sustainable Product Design presents the first systematic overview of the burgeoning field of sustainable product design Brimming with intelligent viewpoints critical propositions practical examples and rich theoretical analyses this book provides an essential point of reference for scholars and practitioners at the intersection of product design and sustainability The book takes readers to the depth of our engagements with the designed world to advance the social and ecological purpose of product design as a critical twenty first century practice Comprising 35 chapters across 6 thematic parts the book s contributors include the most significant international thinkers in this dynamic and evolving field [The Future Designer](#) Michael Leube,2024-06-19 During periods of environmental and societal upheaval design has the potential to be a formidable catalyst towards a sustainable future However to unleash its full power significant shifts in both theory and practice are imperative This book adopts a unique approach blending anthropological perspectives with philosophy and cognitive science and advocates for a thorough transformation of the existing design curriculum Supported by a vast body of literature in evolutionary science and design research the book presents a blueprint for fostering more sustainable patterns of production and consumption This blueprint is grounded in human virtues rather than vices and proposes a new curriculum tailored towards pro sociality and sustainability Leveraging his extensive professional background and expertise in the circular economy Michael Leube offers practical examples methods and tools for implementing sustainable approaches in the

practical work of experienced designers Showcasing cutting edge innovations for pro social and humanitarian design the book ultimately argues that if we change the objective of design from creating desire to creating value we can solve many of the most pressing social problems from the cooperation of citizens to sustainable cities The book will be useful for those studying and teaching design and anthropology and it will also be an important tool for practicing designers and engineers interested in learning how to design for social and ecological awareness **Waste to Wealth** Peter Lacy, Jakob

Rutqvist, 2016-04-30 Waste to Wealth proves that green and growth need not be binary alternatives The book examines five new business models that provide circular growth from deploying sustainable resources to the sharing economy before setting out what business leaders need to do to implement the models successfully [A Future for Planning](#) Michael

Harris, 2019-04-25 As well as being spatial planning is necessarily also about the future and yet time has been relatively neglected in the academic practice and policy literature on planning Time in particular the need for longer term thinking is critical to responding effectively to a range of pressing societal challenges from climate change to an ageing population poor urban health to sustainable economic development This makes the relative neglect of time not only a matter of theoretical importance but also increasing practical and political significance A Future for Planning is an accessible wide ranging book that considers how planning practice and policy have been constrained by short termism as well as by a familiar lack of spatial thinking in policy in response to major social economic and environmental challenges It suggests that failures in planning often represent failures to anticipate and shape the future which go well beyond planning systems and practices rather our failure to plan for the longer term relates to wider issues in policy making and governance This book traces the rise and fall of long term planning over the past 80 years or so but also sets out how planning can take responsibility for twenty first century challenges It provides examples of successes and failures of longer term planning from around the world In short the book argues that we need to put time back into planning and develop forms of planning which serve to promote the sustainability and wellbeing of future generations **The Routledge Companion to the Philosophy of Architectural**

Reconstruction Zoltán Somhegyi, Lisa Giombini, 2024-05-30 This companion investigates the philosophical and theoretical foundations determining the conditions of possibility and the limits that make the conservation readaptation and transformation of past buildings legitimate operations As increasing ecological and economic challenges question opportunities for new construction the process of restoring transforming and readapting buildings for new or continued use is becoming an essential part of architectural practice At the same time the role of building conservation is changing from mere material preservation to being part of a broader strategy for social regeneration eco awareness and inclusive urban planning Chapters of this volume explore the complex set of considerations that inform decisions to merely preserve accurately restore or variously reuse a building They also look at the broader philosophical concerns such as ethical and aesthetic values combined with ideas of heritage history and collective identity Case studies on reconstruction after war

gentrification the restoration of ancient edifices reconstruction following the effects of climate change and the use of technology solutions among many others make this a timely and urgent volume Adopting a broad transcultural perspective with contributions from five continents the volume combines theoretical approaches with more practical case study based investigations and will be of great interest to upper level students and academics working in the fields of architecture conservation urban design aesthetics and heritage management
