

10. PREPARING THE WELL FOR TESTING

This section describes the operations necessary to prepare the well for well testing.

10.1. PREPARATORY OPERATIONS FOR TESTING

10.1.1. Guidelines For Testing 7ins Liner Lap

- 1) While waiting on cement, test the BOP stack according to the Eni-Agip Well Control Policy Manual procedures. Pull out of the hole with the test tool.
- 2) Run a 6ins bit/mill and clean out the 7ins liner to the landing collar (PBTD). The drilling programme must allow for sufficient rat hole to enable TCP guns to be dropped off, if required.
- 3) Run a cement bond/correlation log from PBTD to top of 7ins liner.
- 4) Run in hole with 9⁵/₈ins packer assembly and perform positive and negative tests on liner lap as per the Company Drilling and Completion Supervisor's instructions. As a guideline, conduct a positive test of the liner lap by applying approximately 400psi pressure. Ensure that the burst rating of the 9⁵/₈ins casing is not exceeded. Displace the required amount of fluid from the drillpipe with base oil to give an approximate drawdown on the liner lap and liner of 500psig in excess of maximum drawdown pressure planned for the individual wells. Set the packer and monitor the well head pressure for influx for 1hr. If the liner lap or liner is found to be leaking then a remedial cementing programme will be advised.

10.1.2. Guidelines For Testing 9⁵/₈ins Liner Lap

- 1) While waiting on cement, test the BOP stack according to the Eni-Agip Well Control Policy Manual procedures. Pull out of the hole with the test tool.
- 2) Run a 8⁷/₂ins bit/mill and clean out the 9⁵/₈ins casing to the landing collar (PBTD). The drilling programme must allow for sufficient rat hole to enable TCP guns to be dropped off, if required.
- 3) Run a cement bond/correlation log from PBTD to above the packer setting depth.

10.1.3. General Technical Preparations

- 1) Surface well testing equipment should be installed and pressure tested as per the procedures in Section 7.
- 2) DST tools should be laid out and tested on the pipe desk (Refer to Section 10.8).
- 3) Ensure that all downhole components of the test string are the proper size, i.e. OD, ID, thread type and that the items are clean and clear of any rust, debris, junk, etc. All threads and collars are to be cleaned properly on the rack. Make sure all crossovers are correctly bevelled inside and outside.
- 4) Make a visual inspection to verify the condition of packer rubbers and all DST equipment.
- 5) Drift all DST equipment to ensure full ID for wireline, coiled tubing or Surface Read Out (SRO) tools to be run in the hole.

Well Test Procedures Manual:

Oil Well Testing Handbook Amanat Chaudhry, 2004-01-24 Oil Well Testing Handbook is a valuable addition to any reservoir engineer's library containing the basics of well testing methods as well as all of the latest developments in the field. Not only are evergreen subjects such as layered reservoirs, naturally fractured reservoirs, and wellbore effects covered in depth, but newer developments such as well testing for horizontal wells are covered in full chapters. Covers real life examples and cases. The most up to date information on oil well testing available. The perfect reference for the engineer or textbook for the petroleum engineering student. Surface Well Testing Paul Budworth, Abdullah Tanira, 2024-04-30 With easy oil extraction becoming a thing of the past, new technologies and processes of discovery have been introduced into the exploration of oil and gas. These advancements rely on precise and accurate data in many cases, live during operations. Surface well testing operations acquire the necessary data during exploration, production, and development, and clean data is essential and heavily relied upon. Surface Well Testing: A Practical Guide guides readers on the fundamentals and techniques of surface well testing operations and data acquisition to ensure proper operational procedures and standards. Explains actual operations, equipment, and data acquisition and quality. Introduces readers to the processes and techniques of surface well testing, the required measurements and readings, and how to get the right data to perform accurate reservoir and petroleum engineering calculations. Bridges the gap between practical field operations and simulated engineering and mathematical models. This book supports readers and organisations in the oil and gas industry as an operations reference and training manual to ensure standardisation of operating procedures and accuracy of results. **Process Control** Steve S. Niu, Deyun Xiao, 2022-08-01 Process Control details the core knowledge and practical skills that a successful process control practitioner needs. It explains the essential technologies that are in use in current industrial practice or which may be wanting for the future. The book focuses on practical considerations, not only on those that make a control solution work, but also on those that prevent it from failing, especially for complex control loops and plant-wide control solutions. After discussing the indispensable role of control in modern process industries, the authors concentrate on the skills required for process analysis, control design, and troubleshooting. One of the first books to provide a systematic approach and structured methodology for process analysis and control design, Process Control illustrates that methodology with many practical examples that cover process control, equipment control, and control calculations derived from real projects and applications. The book uses 229 drawings and 83 tables to make the concepts it presents more intuitive and its methodology easy to follow. Process Control will help the practising control engineer to benefit from a wealth of practical experience and good ideas on how to make control work in the real world, and students training to take up roles in process control are shown the applied relevance of control theory in the efficient functioning of industrial plant and the considerations needed to make it work. Advances in Industrial Control reports and encourages the transfer of technology in control engineering. The rapid
