Thirsting for Efficiency M. Shirley, 2002-04-18 One billion people in the world lack safe drinking water and almost 2 billion lack adequate sanitation services As a result millions suffer and die every year from water and sanitation related diseases Poor management and inefficient investment are often responsible for this situation and countless past attempts at reform have accomplished little Recently some developing countries have tried to reverse years of mismanagement of their water and sewerage systems by auctioning contracts to private operators Why do countries that have tolerated mismanagement for decades develop a thirst for efficiency What are the results of their efforts to change What determines success or failure This book fills a gap in the literature by systematically answering these important questions It does so by analyzing reforms in six developing country capitals Buenos Aires Argentina Lima Peru Mexico City Mexico Santiago Chile Abidjan Cote d'Ivoire and Conakry Guinea and the United States in the 19th century It not only assesses economic factors but also explores the roles of laws politics and norms It provides an economic theory of water that encompasses institutional political and economic aspects of reform

A Natural History of Time Pascal Richet, 2009-10-15 The quest to pinpoint the age of the Earth is nearly as old as humanity itself For most of history people trusted mythology or religion to provide the answer even though nature abounds with clues to the past of the Earth and the stars In *A Natural History of Time* geophysicist Pascal Richet tells the fascinating story of how scientists and philosophers examined those clues and from them built a chronological scale that has made it possible to reconstruct the history of nature itself Richet begins

his story with mythological traditions which were heavily influenced by the seasons and almost uniformly viewed time cyclically The linear history promulgated by Judaism with its story of creation was an exception and it was that tradition that drove early Christian attempts to date the Earth For instance in 169 CE the bishop of Antioch for instance declared that the world had been in existence for 5 698 years and the odd months and days Until the mid eighteenth century such natural timescales derived from biblical chronologies prevailed but Richet demonstrates with the Scientific Revolution geological and astronomical evidence for much longer timescales began to accumulate Fossils and the developing science of geology provided compelling evidence for periods of millions and millions of years a scale that even scientists had difficulty grasping By the end of the twentieth century new tools such as radiometric dating had demonstrated that the solar system is four and a half billion years old and the universe itself about twice that though controversial questions remain The quest for time is a story of ingenuity and determination and like a geologist Pascal Richet carefully peels back the strata of that history giving us a chance to marvel at each layer and truly appreciate how far our knowledge and our planet have come **U.S. Energy Outlook and Implications for Energy R&D** United States.
