

DRIVING OPERATION

If you do not succeed in starting the engine, return the key to "0" position, wait 30 seconds and repeat the start.

⚠ Never help the stopping engine by a starter. You are being exposed to the danger of starter damage.

Fig. 000004

Ignition system failure signalisation

A failure of the glowing system is indicated by flashing of the glowing signal lamp (1) and simultaneous activation of the red (1) or orange (2) signal lamp. The failure code is displayed in the screen.

- If the engine is at standstill, the glowing signal lamp flashes twice a second and the signal lamp (2) glows, glowing in the emergency mode is performed similarly at all low temperatures regardless the temperature of the cooling liquid.

- If the engine is at standstill, the glowing signal lamp flashes twice a second and the signal lamp (2) glows, the glowing is turned off (not functioning).

- If the engine is running, the glowing signal lamp glows permanently and the signal lamp (1) glows, there is a failure of the glowing control and glowing was not finished. The failure must be immediately eliminated since there is a danger that the accumulator will be discharged.

*Coolant heater is mounted on the right side of engine block, output 1,000 W, voltage 230 V.

Fig. 000006

DRIVING OPERATION

Starting the engine while using coolant heater

Fig. 000007

With low temperatures of the surroundings, engine starting uses heating coolant. Leads electrical insulation and its protection against dangerous contact must be done pursuant to valid regulations.

1. First plug the plug to the heater.
 2. Then connect heater to electrical network of the voltage of 230 V.
- With regard for the lower engine wear with low temperature, the use of heater is recommended by manufacturer. The duration of heating is dependent on the surrounding temperature (1 - 2 hours before the expected start).

⚠ After completing the heating, disconnect the device first from electrical network and only then disconnect the plug from the heater! Danger of injury due to electricity!

⚠ It is necessary to ensure tractor operator's instruction and regular revision of coolant heater including feeding cable pursuant to valid legislation of the state where the tractor is operated at least prior to each winter period.

Immediately after start

⚠ After starting, set revolutions to 800 - 1,000 rpm and let engine run without load for a period of approx. 2 minutes.

Check greasing, charging and other functions ensuring proper engine operation (controls must go out) in this time. The time of engine operation without load must be observed, in particular in winter period.

Engine heating

Fig. 000008

⚠ Do further heating of the engine during the drive. The heating of the engine by lengthy idle run or sharp increase in revolutions is harmful to the engine. If the temperature of coolant has not reached 40°C, do not exceed the engine revolutions over 2000 rpm.
