

The background of the entire cover is a deep black space filled with numerous white stars of varying sizes. Overlaid on this is a large, semi-transparent silhouette of a human figure. The silhouette is filled with a vibrant, multi-colored nebula or stardust pattern, primarily in shades of yellow, orange, and red, with some blue and green accents. The figure's arms are slightly away from its body, and its head is tilted slightly forward.

## **The Stardust Revolution The New Story Of Our Origin In The Stars:**

**The Stardust Revolution** Jacob Berkowitz,2022-02-15 In 1957 as Americans obsessed over the launch of the Soviet Sputnik satellite another less noticed space based scientific revolution was taking off That year astrophysicists solved a centuries old quest for the origins of the elements from carbon to uranium The answer they found wasn't on Earth but in the stars Their research showed that we are literally stardust The year also marked the first conference that considered the origin of life on Earth in an astrophysical context It was the marriage of two of the seemingly strangest bedfellows astronomy and biology and a turning point that award winning science author Jacob Berkowitz calls the Stardust Revolution In this captivating story of an exciting deeply personal new scientific revolution Berkowitz weaves together the latest research results to reveal a dramatically different view of the twinkling night sky not as an alien frontier but as our cosmic birthplace Reporting from the frontlines of discovery Berkowitz uniquely captures how stardust scientists are probing the universe's physical structure but rather its biological nature Evolutionary theory is entering the space age From the amazing discovery of cosmic clouds of life's chemical building blocks to the dramatic quest for an alien Earth Berkowitz expertly chronicles the most profound scientific search of our era to know not just if we are alone but how we are connected Like opening a long hidden box of old family letters and diaries The Stardust Revolution offers us a new view of where we've come from and brings to light our journey from stardust to thinking beings

**Humanities, Science, Scimat: From Two Cultures To Bettering Humanity** Lui Lam,2024-04-22 The humanities and social science are the disciplines that study human which are essential in helping us to understand ourselves and others and the world around us Since science is the study of everything in the

universe and human is a material system consisting of the same atoms that make up other nonhuman systems humanities are part of science Thus understanding correctly what science is about will be helpful in making progress in the humanities To patch up the gap between the two cultures derived from these two branches of knowledge the best way is to recognize their common root in science and work through humanities science synthesis as advocated by Scimat the new multidiscipline proposed by the author in 2007 Furthermore raising the scientific level of the humanities which include decision making will help to make the world better Humanities Science Scimat details these issues consisting of three parts Part I is about Scimat and the new humanities history philosophy art Part II is on the origin and nature of science new insights on the life and works of selected scientists some thoughts on science communication popularization and case examples of science innovation all from the Scimat perspective While Parts I and II are short essays with no references with rare exceptions Part III are longer articles with full references that supplement Parts I and II Each essay article starts with a color picture They are all easy to read nothing technical In short this book contains the basic knowledge about the humanities and science that everyone should know The aimed readership is anyone from high school students and laypeople to the professors who are interested in what the humanities and science are about and how we can work together to achieve a better humanity

**The Zoomable Universe** Caleb Scharf, 2017-10-17 An epic full color visual journey through all scales of the universe In The Zoomable Universe the award winning astrobiologist Caleb Scharf and the acclaimed artist Ron Miller take us on an epic tour through all known scales of reality from the largest possible magnitude to the smallest Drawing on cutting edge science they begin at the limits of the observable universe a scale spanning 10<sup>27</sup> meters about 93 billion light years And they end in the subatomic realm at 10<sup>-35</sup> meters where the fabric of space time itself confounds all known rules of physics In between are galaxies stars and planets oceans and continents plants and animals microorganisms atoms and much much more Stops along the way all enlivened by Scharf's sparkling prose and his original insights into the nature of our universe include the brilliant core of the Milky Way the surface of a rogue planet the back of an elephant and a sea of jostling quarks The Zoomable Universe is packed with more than 100 original illustrations and infographics that will captivate readers of every age It is a whimsical celebration of discovery a testament to our astounding ability to see beyond our own vantage point and chart a course from the farthest reaches of the cosmos to its subatomic depths in short a must have for the shelves of all explorers

**The Sirens of Mars** Sarah Stewart Johnson, 2020-07-07 Sarah Stewart Johnson interweaves her own coming of age story as a planetary scientist with a vivid history of the exploration of Mars in this celebration of human curiosity passion and perseverance Alan Lightman author of Einstein's Dreams WINNER OF THE PHI BETA KAPPA AWARD FOR SCIENCE NAMED ONE OF THE BEST BOOKS OF THE YEAR BY The New York Times Book Review Times UK Library Journal Lovely Johnson's prose swirls with lyrical wonder as varied and multihued as the apricot deserts butterscotch skies and blue sunsets of Mars Anthony Doerr The New York Times Book Review Mars was once similar to Earth but today there are no rivers no

lakes no oceans Coated in red dust the terrain is bewilderingly empty And yet multiple spacecraft are circling Mars sweeping over Terra Sabaea Syrtis Major the dunes of Elysium and Mare Sirenum on the brink perhaps of a staggering find one that would inspire humankind as much as any discovery in the history of modern science In this beautifully observed deeply personal book Georgetown scientist Sarah Stewart Johnson tells the story of how she and other researchers have scoured Mars for signs of life transforming the planet from a distant point of light into a world of its own Johnson s fascination with Mars began as a child in Kentucky turning over rocks with her father and looking at planets in the night sky She now conducts fieldwork in some of Earth s most hostile environments such as the Dry Valleys of Antarctica and the salt flats of Western Australia developing methods for detecting life on other worlds Here with poetic precision she interlaces her own personal journey as a female scientist and a mother with tales of other seekers from Percival Lowell who was convinced that a utopian society existed on Mars to Audouin Dollfus who tried to carry out astronomical observations from a stratospheric balloon In the process she shows how the story of Mars is also a story about Earth This other world has been our mirror our foil a telltale reflection of our own anxieties and yearnings Empathetic and evocative *The Sirens of Mars* offers an unlikely natural history of a place where no human has ever set foot while providing a vivid portrait of our quest to defy our isolation in the cosmos

**Astrobiology, Discovery, and Societal Impact** Steven J. Dick, 2018-05-03 The search for life in the universe once the stuff of science fiction is now a robust worldwide research program with a well defined roadmap probing both scientific and societal issues This volume examines the humanistic aspects of astrobiology systematically discussing the approaches critical issues and implications of discovering life beyond Earth What do the concepts of life and intelligence culture and civilization technology and communication mean in a cosmic context What are the theological and philosophical implications if we find life and if we do not Steven J Dick argues that given recent scientific findings the discovery of life in some form beyond Earth is likely and so we need to study the possible impacts of such a discovery and formulate policies to deal with them The remarkable and often surprising results are presented here in a form accessible to disciplines across the sciences social sciences and humanities

[Theological Cartographies](#) Benjamin Valentin, 2015-03-14 Benjamin Valentin presents a substantive yet accessible introduction to the three central doctrines of Christian theology God humanity and Christ In an engaging style Valentin offers an overview of each of these doctrines delving into its tradition within the Christian community throughout history from the writing of Scripture forward He further explores what contemporary life tells us about this doctrine and how that compares to traditional understandings and then determines how we can reconstruct this doctrine in light of our new assessment of it Each chapter concludes with suggested readings for further study Throughout Valentin highlights the diversity of Christian thought bringing together past tradition and contemporary questions to arrive at a new understanding of what these important doctrines can mean for us today

Physics World's Book of the Year The Sunday Times UK Best Science Book of 2014 A Publishers Weekly Top 10 Science Book of Fall 2014 An NBC News Top Science and Tech Book of 2014 A Politics Prose 2014 Staff Pick In the sixteenth century Nicolaus Copernicus dared to go against the establishment by proposing that Earth rotates around the Sun Having demoted Earth from its unique position in the cosmos to one of mediocrity Copernicus set in motion a revolution in scientific thought This perspective has influenced our thinking for centuries However recent evidence challenges the Copernican Principle hinting that we do in fact live in a special place at a special time as the product of a chain of unlikely events But can we be significant if the Sun is still just one of a billion trillion stars in the observable universe And what if our universe is just one of a multitude of others a single slice of an infinity of parallel realities In *The Copernicus Complex* the renowned astrophysicist Caleb Scharf takes us on a scientific adventure from tiny microbes within the Earth to distant exoplanets probability theory and beyond arguing that there is a solution to this contradiction a third way of viewing our place in the cosmos if we weigh the evidence properly As Scharf explains we do occupy an unusual time in a 14 billion year old universe in a somewhat unusual type of solar system surrounded by an ocean of unimaginable planetary diversity hot Jupiters with orbits of less than a day planet size rocks spinning around dead stars and a wealth of alien super Earths Yet life here is built from the most common chemistry in the universe and we are a snapshot taken from billions of years of biological evolution Bringing us to the cutting edge of scientific discovery Scharf shows how the answers to fundamental questions of existence will come from embracing the peculiarity of our circumstance without denying the Copernican vision With characteristic verve Scharf uses the latest scientific findings to reconsider where we stand in the balance between cosmic significance and mediocrity order and chaos Presenting a compelling and bold view of our true status *The Copernicus Complex* proposes a way forward in the ultimate quest determining life's abundance not just across this universe but across all realities

*The Restless Clock* Jessica Riskin, 2016-03-10 A wide ranging witty and astonishingly learned scientific and cultural history of the concept of the capacity to act in nature London Review of Books Today a scientific explanation is not meant to ascribe agency to natural phenomena we would not say a rock falls because it seeks the center of the earth Even for living things in the natural sciences and often in the social sciences the same is true A modern botanist would not say that plants pursue sunlight This has not always been the case nor perhaps was it inevitable Since the seventeenth century many

thinkers have made agency in various forms central to science The Restless Clock examines the history of this principle banning agency in the life sciences It also tells the story of dissenters embracing the opposite idea that agency is essential to nature The story begins with the automata of early modern Europe as models for the new science of living things and traces questions of science and agency through Descartes Leibniz Lamarck and Darwin among many others Mechanist science Jessica Riskin shows had an associated theology the argument from design which found evidence for a designer in the mechanisms of nature Rejecting such appeals to a supernatural God the dissenters sought to naturalize agency rather than outsourcing it to a divine engineer Their model cast living things not as passive but as active self making machines The conflict between passive and active mechanist approaches maintains a subterranean life in current science shaping debates in fields such as evolutionary biology cognitive science and artificial intelligence This history promises not only to inform such debates but also our sense of the possibilities for what it means to engage in science and even what it means to be alive Praise for The Restless Clock A wonderful contribution and much needed corrective to the history of European ideas about life and matter Evelyn Fox Keller author of The Mirage of a Space between Nature and Nurture Engrossing and illuminating Nature A sweeping survey of the search for answers to the mystery of life Riskin writes with clarity and wit and the breadth of her scholarship is breathtaking Times Higher Education UK *Engaging the Doctrine of Creation* Matthew Levering, 2017-07-18 Distinguished scholar Matthew Levering examines the doctrine of creation and its contemporary theological implications critically engaging with classical and modern views in dialogue with Orthodox and Reformed interlocutors among others Moving from the Trinity to Christology Levering takes up a number of themes pertaining to the doctrine of creation and focuses on how creation impacts our understandings of both the immanent and the economic Trinity He also engages newer trends such as ecological theology *Philosophical Perspectives on the Engineering Approach in Biology* Sune Holm, Maria Serban, 2020-06-07 Philosophical Perspectives on the Engineering Approach in Biology provides a philosophical examination of what has been called the most powerful metaphor in biology The machine metaphor The chapters collected in this volume discuss the idea that living systems can be understood through the lens of engineering methods and machine metaphors from both historical theoretical and practical perspectives In their contributions the authors examine questions about scientific explanation and methodology the interrelationship between science and engineering and the impact that the use of engineering metaphors in science may have for bioethics and science communication such as the worry that its wide application reinforces public misconceptions of the nature of new biotechnology and biological life The book also contains an introduction that describes the rise of the machine analogy and the many ways in which it plays a central role in fundamental debates about e g design adaptation and reductionism in the philosophy of biology The book will be useful as a core reading for professionals as well as graduate and undergraduate students in courses of philosophy of science and for life scientists taking courses in philosophy of science and bioethics
