The Story Of Carbon First :

The Story of Upfront Carbon Lloyd Alter, 2024-05-21 When you look at the world through the lens of upfront carbon everything changes The astonishing upfront carbon of everyday objects from coffee cups to heat pumps and why electric bikes not electric cars are the answer Think that buying an electric car or switching to a heat pump is going to save the planet Think again Upfront carbon refers to all emissions involved in making your car your home or any other item These invisible embodied carbon emissions matter a lot As we weed out fossils fuels and incorporate more renewables into our energy supply upfront carbon becomes increasingly dominant compared to operating emissions yet it is often ignored By focusing on consumption rather than production The Story of Upfront Carbon covers Why we are fixated on energy efficiency not carbon and why this needs to change Why carbon calculations are so fiendishly difficult How the simple idea of sufficiency for individuals and whole economies is a powerful strategy to avert looming climate catastrophe How big picture thinking and a systemic approach to production can help guide the transition to degrowth and an equitable zero carbon society Leavened with wit and packed with concrete strategies for minimizing the ecological footprint of transportation agriculture consumer goods the built environment and more this highly readable and accessible guide is required reading for a world on the brink AWARDS DISTINGUISHED FAVORITE 2025 Independent Press Award Social Political Change

Union s Emissions Trading Scheme EU ETS is the world s largest market for carbon and the most significant multinational initiative ever taken to mobilize markets to protect the environment It will be an important influence on the development and implementation of trading schemes in the US Japan and elsewhere However as is true of any pioneering public policy experiment this scheme has generated much controversy Pricing Carbon provides the first detailed description and analysis of the EU ETS focusing on the first trial period of the scheme 2005-7 Written by an international team of experts it allows readers to get behind the headlines and come to a better understanding of what was done and what happened based on a dispassionate empirically based review of the evidence This book should be read by anyone who wants to know what happens when emissions are capped traded and priced History of Carbon County, Pennsylvania Frederick Charles

Brenckman, 1913 *The Story of America : Beginnings to 1877: Volume 1* John Arthur Garraty, 1992 The Story of America tells our story because it is important in itself It is a great epic and the unique tale of how hundreds of millions of people took possession of a vast continent often at the expense of the original inhabitants The Story of America contains many original documents and lengthy excerpts from primary and secondary sources These include eyewitness accounts poems song lyrics diary entries and excerpts from a variety of other sources The Writer's Digest ,1923 Carbon Capture and Storage in the United Kingdom Marc Hudson, 2024-03-27 This book is a concise but comprehensive guide to the history present and possible futures of carbon capture and storage policy and action in the United Kingdom UK There have been multiple failed starts promises and last chances for carbon capture and storage CCS in Europe North America China and Australia but thus far it has repeatedly collided with the political and economic realities that the technology is too expensive and complicated to gain and keep policymakers support However in the UK that might be changing with explicit government support for CCS to help decarbonise industry Set within the broader context of global interest in CCS this book first outlines the technologies involved in the types of capture technology transport options and storage options in the UK It then briefly introduces an overarching policy analysis framework John Kingdon s multiple streams approach and uses it to give an account of the long history of CCS interest and efforts in three chapters covering the 1970s to 2002 2003 to 2015 and 2016 to the present day

Marc Hudson focusses on the various arguments made for the introduction of CCS and the slowly shifting coalitions of actors who make those arguments while contrasting these with the perspectives of those opposed to CCS This book will be of great interest to students scholars and policymakers researching and working in the field as well as the related areas of energy policy energy transitions and climate change Carbon in Earth Robert M.
