

HUNTERIANA

William Clift: the surgeon's apprentice

John Hunter's work has been thoroughly vindicated through succeeding generations so that his personal irascibility has been accepted as an amusing aspect of an eighteenth-century 'character'. Some contemporaries found the genius less attractive. He disagreed with his brother William. When he died in a meeting at St George's Hospital in 1793 colleagues were already hoping that he might resign his post¹. The next year he was the victim of Jesse Foot's villainous biography², and years later his notes were used as lavatory paper in the household of his brother-in-law Everard Home, who built up a reputation by using them as the basis of his own work³.

Among contemporaries who took his real measure his last apprentice, William Clift (1775-1849), was unique. He was the seventeen-year-old orphan of a Bodmin miller and his artistic flair had attracted the attention of Nancy Gilbert of Priory, Bodmin. Anne Hunter had been at school with Mrs Gilbert, who recommended Clift when Hunter was in need of a new assistant. Hunter died twenty months after Clift joined him in London and Clift's knowledge at the time could not have enabled him to make a just estimate of the surgeon. But, however he came by it, Clift had one insight that distinguished him from his superiors. He saw that without Hunter's 'catalogue' the famous 'collection' would lose more than half of its value. This insight cannot have been instantaneous, but it had begun to possess him by the time that Hunter died. In spite of the occasional bilious note made in later life when he had become a man of consequence, Clift never doubted the value of Hunter's work, and he instinctively made himself the servant

of Hunter's original conception of the museum and, incidentally, the servant of the family.

Although evidence of the relationship is naturally one-sided, the link with Anne Hunter's lifelong friend Nancy Gilbert occasioned the Hunters to comment on Clift's early steps along the road of self-improvement, and the tone of these remarks discloses—what is seldom revealed in letters of the time—a *personal* concern for the underling.

Clift reached Leicester Square on the 14th of February 1792, his seventeenth birthday

A history of surgery D. de Moulin, 2012-12-06 Surgery as a medical discipline has from its beginnings appealed to the imagination of many It is therefore not surprising to find that its colourful past has induced quite a few authors to take up their pens The truth of this in the Netherlands is witnessed by a number of dissertations and monographs and especially by the numerous articles related to the history of surgery which have appeared in the medical weekly Nederlands Tijdschrift voor Geneeskunde particularly during the two decades preceding the Second World War The memorial volume published in 1977 by the Nederlandse Vereniging voor Heelkunde Association of Surgeons of the Netherlands has thoroughly covered the history of Dutch surgery since the turn of the century but a chronological survey of the earlier events which led to these modern achievements is still wanting This book has been written with a view to meeting this need In it Dutch surgery has by no means been taken as an isolated

phenomenon but considered in its context with European surgery as a whole Foreign influences on the on surgery abroad are discussed Netherlands and conversely Dutch influences whilst contemporary medical thinking is set against a cultural and political back ground It is hoped that this approach will allow the book to exceed the narrow boundaries of campanilismo and make it of interest to non Dutch readers as well

Knowledge and Practice in English Medicine, 1550-1680 Andrew Wear, 2000-11-16 This is a major synthesis of the knowledge and practice of early modern English medicine in its social and cultural contexts The book vividly maps out some central areas remedies and how they were made credible notions of disease advice on preventive medicine and on healthy living and how surgeons worked upon the body and their understanding of what they were doing The structures of practice and knowledge examined in the first part of the book came to be challenged in the later seventeenth century when the new science began to overturn the foundation of established knowledge However as the second part of the book shows traditional medical practice was so well entrenched in English culture that much of it continued into the eighteenth century Various changes did however occur which set the agenda for later medical treatment and which are discussed in the final chapter
