Wood Structure in Plant Biology and Ecology Pieter Baas,2013-12-09 At present the study of functional and ecological wood anatomy enjoys a vigorous renaissance and plays a pivotal role in plant and ecosystem biology plant evolution and global change research This book contains a selection of papers presented at the successful meetings of the International Association of Wood Anatomists and the Cost Action STReESS Studying Tree Responses to extreme Events a Synthesis held in Naples in April 2013 Four review papers address 1 the hydraulic architecture of the earliest land plants 2 the general phenomenon of axial conduit tapering in trees 3 the hydraulic and biomechanical optimization in one of the most important plantation grown tree species Norway Spruce and 4 cellular and subcellular changes in the cambium in response to environmental factors Three papers review or introduce new tools to observe the 3 D structure and functioning of wood and novel tools for quantitative image analysis in tree ring series Finally five papers report original research on environmental effects on wood structure including studies on plastic responses in European beech effects of fire or late summer rains on Mediterranean Aleppo Pine and the potential for using arctic shrubs or tropical deciduous trees in dendrochronological and climatological studies Reprinted from IAWA Journal 34 4 2013

Cellular Aspects of Wood Formation Jörg Fromm,2013-04-11 With today s ever growing economic and ecological problems wood as a raw material takes on increasing significance as the most important renewable source of energy and as

industrial feedstock for numerous products Its chemical and anatomical structure and the excellent properties that result allow wood to be processed into the most diverse products from logs to furniture and veneers and from wood chippings to wooden composites and paper The aim of this book is to review advances in research on the cellular aspects of cambial growth and wood formation in trees over recent decades The book is divided into two major parts The first part covers the basic process of wood biosynthesis focusing on five major steps that are involved in this process cell division cell expansion secondary cell wall formation programmed cell death and heartwood formation The second part of the book deals with the regulation of wood formation by endogenous and exogenous factors On the endogenous level the emphasis is placed on two aspects control of wood formation by phytohormones and by molecular mechanisms Apart from endogenous factors various exogenous effects such as climate factors are involved in wood formation Due to modern microscopic as well as molecular techniques the understanding of wood formation has progressed significantly over the last decade Emphasizing the cellular aspects this book first gives an overview of the basic process of wood formation before it focuses on factors involved in the regulation of this process
