probably 25 per cent of the present dwellings in any town not of recent growth and perhaps in others also would have to be superseded and in all probability another 25 per cent would only be deemed fitting homes for the people after improvement by considerable alteration Consistently with my original intention as mentioned at the beginning of this book I refrain from indulging in flights of fancy on this subject as on others already dealt with or I might have suggested a delightful scheme of rebuilding my city on Garden City lines every detail prearranged and mapped out to be materialised on a new site Such a scheme after all the thought given to the subject in recent years might win the approval of a section of the public others would criticise and show a better way on paper a larger number would be simply indifferent To existing cities neither the possibilities of such a

From the City as a Project to the City Project Fernando Carrión Mena, Sebastián Rodríguez Alvarez, 2025-09-26 The city has historically been conceived as a project with a sense of duty to be it is the prefiguration of a reality that emerges from the negation of the pre existing city The city anticipates a desired future from an ideal perspective that tends to overcome the existing structural or particular challenges of the present It can be argued that this proposition represents the historical trajectory of urban thought on a planetary scale Therefore the prospective dimension of the city constituted a central dynamic in urban theory throughout history leading to the emergence of planning as a key approach The history of the city as a project is the core of the first volume in this two part contribution It presents an overview of diverse city projects that have been pursued throughout history providing a framework for exploring new perspectives of urban development The cities profiled and analyzed here reflect a living catalog of initiatives that can inform promising directions More than a compilation this volume compares and critically assesses these historical projects to provide a grounding for the contemporary advances presented in the second volume

Claiming the City Shelton Stromquist, 2023-02-14 How workers fought for municipal socialism to make cities around the globe livable and democratic and what the lessons are for today Winner of the International Labor History Association ILHA 2023 Book of the Year Award for labor history For more than a century municipal socialism has fired the imaginations of workers fighting to make cities livable and democratic At every turn propertied elites challenged their right to govern Prominent US labor historian Shelton Stromquist offers the first global

account of the origins of this new trans local socialist politics He explains how and why cities after 1890 became crucibles for municipal socialism Drawing on the colorful stories of local activists and their social democratic movements in cities as diverse as Broken Hill Christchurch Malm Bradford Stuttgart Vienna and Hamilton OH the book shows how this new urban politics arose Long governed by propertied elites cities in the nineteenth century were transformed by mass migration and industrialization that tore apart their physical and social fabric Amidst massive strikes and faced with epidemic disease fouled streets unsafe water decrepit housing and with little economic security and few public amenities urban workers invented a local politics that promised to democratize cities they might themselves govern and reclaim the wealth they created This new politics challenged the class power of urban elites as well as the centralizing tendencies of national social democratic movements Municipal socialist ideas have continued to inspire activists in their fight for the right of cities to govern themselves

Tourists, Signs and the City Michelle M. Metro-Roland, 2016-02-24 Drawing upon the literature of landscape geography tourism studies cultural studies visual studies and philosophy this book offers a multi disciplinary approach to understanding the interaction between urban environments and tourists This is a necessary prerequisite for cities as they make themselves into enticing destinations and compete for tourists attention It argues that tourists make sense of and draw meaningful conclusions about the places in which they tour based upon the interpretation of the signs or elements encountered within the built environment elements such as graffiti and lamp posts The writings of the American pragmatist Charles S Peirce on interpretation provide the theoretical model for explaining the way in which mind and world or thoughts and objects result in tourists interacting with place This theoretical framework elucidates three applied studies undertaken with foreign visitors to the Hungarian capital of Budapest Based upon extensive ethnographic field work these studies focus on tourists interpretation of the urban landscape with particular attention paid to the encounters with national culture the role of architecture and the importance of the prosaic in urban tourism

Green Landscapes in the European City, 1750–2010 Peter Clark, Marjaana Niemi, Catharina Nolin, 2016-12-08 Green space is a fundamental concept for understanding modern and contemporary urban society shedding light not only on the ecological development of cities but also societal relations urban governance and planning processes Closely linked to issues of environmental change changing perceptions of nature urban well being and social integration as well as city economic competitiveness and branding it is an important element both in the internationalisation of European cities and the forging of their distinctive communal identities Building upon recent research on the history of green landscapes in the city in Europe and North America this volume mirrors the burgeoning global attention to urban green space developments from city policy makers and planners architects climatologists ecologists geographers and other social scientists Taking case studies from Paris London Berlin Helsinki and other leading centres the volume examines when why and how green landscapes evolved in major cities and the extent to which they have been shaped by shared external forces as well as by distinctive and specific local needs Quantifying green

space trends in this way raises important issues of classification and categorisation of the different varieties of urban green space While urban parks have received considerable coverage many other smaller less prestigious spaces have been largely ignored This volume argues that green landscapes can only be properly understood when the full range of spaces from parks to recreation grounds housing areas allotments and domestic gardens is taken into account Adopting a broader approach to urban green space helps put European developments during the 19th and 20th centuries into a global perspective

Claiming the City Mary Lethert Wingerd, 2003 The author brings together the voices of citizens and workers and the power dynamics of civic leaders including James J Hill and Archbishop John Ireland **Transnationalism and the German City** J. Diefendorf, J. Ward, 2014-04-24 Too often scholars treat transnationalism as a conflict in which the local regional and national give way to globalized identity As these varied studies of German cities show though the urban environment is actually a site of trans localism that is not merely oppositional but that adapts itself dialectically to the forces of globalization

Remembering, Forgetting and City Builders Haim Yacobi, 2016-04-08 *Remembering Forgetting and City Builders* critically explores how urban spaces are designed planned and experienced in relation to the politics of collective and personal memory construction Bringing together case studies from North America South Asia Eastern Europe and the Middle East the book analyzes how contested national ethnic and cultural sentiments clash in planning and experiencing urban spaces Going beyond the claim that such situations exist in many parts of the world because communities construct their past memories within their current daily life and future aspirations the book explores how the very acts of planning and urban design are rooted in the existing structures of hegemonic power With contributors from the fields of architecture geography planning anthropology and sociology urban studies and cultural studies the book provides a rich interdisciplinary view into the conflicts over memory and belonging which are spatially expressed and mediated through the official planning apparatus

Understanding the City John Eade, Christopher Mele, 2011-07-15 This cutting edge multi disciplinary analysis looks ahead to the direction which urban studies is likely to take during the twenty first century *Labor Digest*, 1925 **The Human City** Joel Kotkin, 2016-04-12 The author of *The Coming of Neo Feudalism* and *The New Class Conflict* challenges conventions of urban planning Around the globe most new urban development has adhered to similar tenets tall structures small units and high density In *The Human City* Joel Kotkin called America's uber geographer by David Brooks of the New York Times questions these nearly ubiquitous practices suggesting that they do not consider the needs and desires of the vast majority of people Built environments Kotkin argues must reflect the preferences of most people even if that means lower density development *The Human City* ponders the purpose of the city and investigates the factors that drive most urban development today Armed with his own astute research a deep seated knowledge of urban history and a sound grasp of economic political and social trends Kotkin pokes holes in what he calls the retro urbanist ideology and offers a refreshing case for dispersion centered on human values This book is not anti urban but it does advocate a greater range of options for

people to live the way they want at all stages of their lives Praise for *The Human City* Kotkin presents the most cogent evidence based and clear headed exposition of the pro suburban argument In pithy readable sections each addressing a single issue he debunks one attack on the suburbs after another But he does more than that He weaves an impressive array of original observations about cities into his arguments enriching our understanding of what cities are about and what they can and must become Shlomo Angel Wall Street Journal The most eloquent expression of urbanism since Jane Jacobs s *The Death and Life of Great American Cities* Kotkin writes with a strong sense of place he recognizes that the geography and traditions of a city create the contours of its urbanity Ronnie Wachter Chicago Tribune
