The Steel Remains:

The Steel Remains Richard K. Morgan, 2010-01-12 Bold brutal and making no compromises Morgan doesn't so much twist the clichés of fantasy as take an axe to them Joe Abercrombie A dark lord will rise Such is the prophecy that dogs Ringil Eskiath Gil for short a washed up mercenary and onetime war hero whose cynicism is surpassed only by the speed of his sword Gil is estranged from his aristocratic family but when his mother enlists his help in freeing a cousin sold into slavery Gil sets out to track her down But it soon becomes apparent that more is at stake than the fate of one young woman Grim sorceries are awakening in the land Some speak in whispers of the return of the Aldrain a race of widely feared cruel yet beautiful demons Now Gil and two old comrades are all that stand in the way of a prophecy whose fulfillment will drown an entire world in blood But with heroes like these the cure is likely to be worse than the disease Praise for *The Steel Remains* The award winning author of *Altered Carbon* and *Market Forces* brings the same iconoclastic approach to his fantasy debut as he did to his sf technothrillers Richard K Morgan's storytelling talent and his atmospheric hard hitting prose make this a strong addition to mature fantasy collections Library Journal Spellbinding There's so much to like about the adventure *The Star Ledger* Morgan has taken traditional sword and sorcery tropes and given them a hard contemporary kick The antithesis of the cosy fairytale this one is for big boys The Times London A dark gritty tale The well developed characters and realistic battle scenes ring true Publishers Weekly

The Cold Commands Richard K. Morgan, 2011 Morgan continues the riveting saga of Ringil Eskiath Gil for short a peerless warrior whose love for other men has made him an outcast and pariah Only a select few have earned the right to call Gil friend One is Egar the Dragonbane a fierce Majak fighter who comes to respect a heart as savage and loyal as his own

Building Better - Less - Different: Clean Energy Transition and Digital Transformation

Felix Heisel,Dirk E. Hebel,2023-11-06 Sustainability Sustainability is to become the guiding principle of social action and economic activity At the same time its ways and means are far from clear As a holistic praxis sustainability must combine technical and material as well as social economic ecological and also ethical strategies which have multiple complex interactions and all too often also conflicting goals and priorities In no other field can these be better observed addressed and influenced than in architecture and building Building Better Less Different Each volume of Building Better Less Different details two fundamental areas of sustainability and explores their specific dynamics and interactions After introductory overviews innovative methods and current developments are described and analysed in in depth essays international case studies and pointed commentaries The sustainability criteria of efficiency better sufficiency less and consistency different form the framework for each book What the press say about the first volume Circular Construction and Circular Economy The articles case studies and commentaries in this book make a major contribution to advancing the current discourse on implementing circular based economic models in the building sector Hessian Chamber of Architects book reviews To think of tomorrow when building today is the core message that Dirk E Hebel and Felix Heisel want to convey to their readers And they also show us how with the help of relevant examples grouped under the headings better less and different they demonstrate concrete applications and argue that circular construction can also benefit the construction industry architektur aktuell Clean energy transition It has long been common knowledge that energy and sustainability are closely interlinked And yet we are witnessing a profound shift in the sector While the earlier focus was on improving energy efficiency and increasing the proportion of renewable energy in buildings current energy conservation policies are supporting a broader

more holistic view This encompasses integral approaches in which building design and construction measures form part of the energy concept from the outset as well as accounting for grey energy in building materials and a holistic evaluation of buildings over their entire life cycle For the energy intensive and emission producing building sector climate change presents an even greater challenge than conserving resources How can we contribute to a shift in heating strategies and employ new technologies to achieve climate neutral heating How can we respond to rising temperatures and the risk of increased energy consumption for cooling Can low tech concepts help to reduce the environmental impact of buildings over their life cycle Shouldn t we take greater account of the users of buildings and do we need completely different energy supply strategies

Digital Transformation At a time of natural ubiquity of digital tools widely adopted to streamline project delivery in architecture the foundations have been laid for a profound transformation of the construction industry to address the climate crisis Digital architectural design and construction methods can be used as enabling technologies for a fundamental change towards a circular construction approach with significantly reduced ecological and climate impact This approach comprises a digital reinterpretation of natural building materials through digital construction technologies Digital deconstruction and reuse strategies can transform the existing building stock into resources for the future Mass customization of tailor made building components minimizes resource consumption Architects in their emerging role as interdisciplinary interface and digital master builders reunite design and making through digital craft Finally the book provides a glimpse into the potential future of construction which might be characterized by fundamentally different concepts of design and materialization of our built environment challenging current paradigms within our discipline
