text to the field of plant cell and subcellular biology The book is designed as an advanced text for upper level undergraduate and graduate students with student friendly diagrams and clear explanations *Plastid Development in Leaves during Growth and Senescence* Basanti Biswal, Karin Krupinska, Udaya C. Biswal, 2013-07-08 Chloroplast development is a key feature of leaf developmental program Recent advances in plant biology reveal that chloroplasts also determine the development the structure and the physiology of the entire plant The books published thus far have emphasized the biogenesis of the organelle but not the events associated with the transformation of the mature chloroplast to the gerontoplast during senescence This book with 28 chapters is unique because it describes how the chloroplast matures and how it is subsequently transformed to become the gerontoplast during senescence a process required for nutrient recycling in plants This book includes a state of the art survey of the current knowledge on the regulation and the mechanisms of chloroplast development Some of the chapters critically discuss the signaling process the expression potential of plastid DNA the interaction of cellular organelles and the molecular mechanisms associated with the assembly and the disassembly of organellar complexes and finally the modulation of chloroplast development by environmental signals Plastid Biology Kevin Pyke, 2009-04-30 Provides advanced students with a basic knowledge of plastid biology and recent developments in the field Advances in Plastid Biology and Its Applications Niaz Ahmad, Steven J. Burgess, Brent L. Nielsen, 2016-12-12 One of the distinguishing features of plants is the presence of membrane bound organelles called plastids Starting from proplastids undifferentiated plastids they readily develop into specialised types which are involved in a range of cellular functions such as photosynthesis nitrogen assimilation biosynthesis of sucrose starch chlorophyll carotenoids fatty acids amino acids and secondary metabolites as well as a number of metabolic reactions like sulphur metabolism The central role of plastids in many aspects of plant cell biology means an in depth understanding is key for a holistic view of plant physiology Despite the vast amount of research the molecular details of many aspects of plastid biology remains limited Plastids possess their own high copy number genome known as the plastome Manipulation of the plastid genome has been developed as an alternative way to developing transgenic plants for various biotechnological applications High copy number of the plastome site specific integration of transgenes through homologous recombination and potential to express proteins at high levels 70% of total soluble proteins has been reported in some cases are some of the technologies being developed Additionally plastids are inherited maternally providing a natural gene containment system and do not follow Mendelian laws of inheritance allowing each individual member of the progeny of a transplastomic line to uniformly express transgene s Both algal and higher plant chloroplast transformation has been demonstrated and with the ability to be propagated either in bioreactors or in the field both systems are well suited for scale up of production The manipulation of chloroplast genes is also essential for many approaches that attempt to increase biomass accumulation or re routing metabolic pathways for biofortification food and fuel production This includes metabolic engineering for lipid production adapting the light harvesting apparatus to improve solar

conversion efficiencies and engineering means of suppressing photorespiration in crop species which range from the introduction of artificial carbon concentrating mechanisms or those pre existing elsewhere in nature to bypassing ribulose biphosphate carboxylase oxygenase entirely The purpose of this eBook is to provide a compilation of the latest research on various aspects of plastid biology including basic biology biopharming metabolic engineering bio fortification stress physiology and biofuel production
