The Structure Of Spoken Language Intonation In Romance:

The Structure of Spoken Language Philippe Martin, 2015-11-26 Using an innovative approach this book focuses on a widely debated area of phonetics and phonology intonation and specifically its relation to metrics its interface with syntax and whether it can be attributed more to phonetics or phonology or equally to both Drawing on data from six Romance languages French Italian Spanish Portuguese Catalan and Romanian whose rich intonation patterns have long been of interest to linguists Philippe Martin challenges the assumptions of traditional phonological approaches and re evaluates the data in favour of a new usage based model of intonation He proposes a unified description of the sentence prosodic structure focusing on the dynamic and cognitive aspects of both production and perception of intonation in speech leading to a unified grammar of Romance languages sentence intonation This book will be welcomed by researchers and advanced students in phonetics and phonology

The Structure of Spoken Language Jean-Philippe Martin, 2015 One of the most remarkable features of phonation is the disruption of the normal respiratory cycle Indeed outside phonation the normal cycle of respiration presents a comparable duration for both the inspiration and the expiration top of Figure 1 1 Figure 1 1 Respiration cycle without phonation top and with phonation bottom The first produced prosodic units are breath groups At early stages of language learning children mainly use the necessary silent pause in the inspiration phase of their respiratory cycle as boundary markers of these units The phonation process results from the air flow generated by the lung compression during the respiration expiration phase This air flow generates the necessary subglottal pressure needed to produce the vibration of the vocal folds for voiced sounds vowels voiced consonants friction for fricative consonants and intraoral pressure to allow the production of stop consonants

In Search of Basic Units of Spoken Language
Shlomo Izre'el, Heliana Mello, Alessandro Panunzi, Tommaso Raso, 2020-06-15 What is the best way to analyze spontaneous spoken language In their search for the basic units of spoken language the authors of this volume opt for a corpus driven approach They share a strong conviction that prosodic structure is essential for the study of spoken discourse and each bring their own theoretical and practical experience to the table In the first part of the book they segment spoken material from a range of different languages Russian Hebrew Central Pomo an indigenous language from California French Japanese Italian and Brazilian Portuguese In the second part of the book each author analyzes the same two spoken English samples but looking at them from different perspectives using different methods of analysis as reflected in their respective analyses in Part I This approach allows for common tendencies of segmentation to emerge both prosodic and segmental

Information Structure in Lesser-described Languages Evangelia Adamou, Katharina Haude, Martine Vanhove, 2018-08-02 The articles compiled in this volume offer new insights into the wealth of prosodic and syntactic phenomena involved in the encoding of information structure categories They present data from languages which are rarely if ever taken into account in the most

prominent approaches in information structure theory and which belong to the Afroasiatic Amerindian Australian Caucasian and Niger Congo language stocks In addition to the significant descriptive value of these pioneering contributions several studies also draw attention to previously undescribed or typologically rare phenomena By adapting a variety of methods to under described and endangered languages ranging from experimental to naturalistic corpus studies this volume also aims to serve as an invitation for further research in this direction

Spoken Language Corpus and Linguistic Informatics Yuji Kawaguchi, Susumu Zaima, Toshihiro Takagaki, 2006-12-13 Linguistic Informatics is a research field named by the Center of Excellence COE Program Usage Based Linguistic Informatics UBLI which aims to systematically integrate studies in computer science linguistics and language education The first part of this volume contains three lectures on spoken language analysis and corpus linguistics delivered at the Second International Conference on Linguistic Informatics held on December 10 2005 The nine contributions in the second part come from the Collaboration Workshop on spoken language corpora between UBLI and C ORAL ROM a consortium researching the spoken Romance languages In the third part four studies representative of Linguistic Informatics are presented These studies deal with 1 Corpus based analysis of linguistic usages 2 Typological study of different languages 3 Effective integration of e learning and task based face to face teaching and 4 Fosterage of language education researchers with expertise in the field of Linguistic Informatics

Sentential Form and Prosodic Structure of Catalan Ingo Feldhausen, 2010-11-25 This monograph presents an experimental and theoretical inquiry into the role of sentential form and variation in the prosodic structure of Catalan The empirical section examines intonational phrasing across sentence forms including SVO structures with either nominal or sentential objects and structures involving clitic left and right dislocations The results show variation in phrasing that depends on syntactic factors and non syntactic factors such as topic hood and prosodic binarity The theoretical section uses Stochastic Optimality Theory to model the variation and frequency distributions associated with the observed prosodic patterns Various syntactic and non syntactic factors are represented by alignment constraints which play a major role in Catalan and by constraints that limit

size and those that limit the overall amount of prosodic structure This study represents a combined approach to prosody and syntax and is of particular relevance for theoretical and empirical linguists interested in the relationship between these domains both in Catalan and other languages *The Effects of Music on Cognition and Action* Marta Olivetti Belardinelli,Franco Delogu,Elvira Brattico,Cunmei Jiang,2022-03-18 **Revista brasileira de lingüística aplicada** ,2011
