Method Jutta Schickore, 2017-05-19 Scientists' views on what makes an experiment successful have developed dramatically throughout history Different criteria for proper experimentation were privileged at different times entirely new criteria for securing experimental results emerged and the meaning of commitment to experimentation altered In About Method Schickore captures this complex trajectory of change from 1660 to the twentieth century through the history of snake venom research As experiments with poisonous snakes and venom were both challenging and controversial the experimenters produced very detailed accounts of their investigations which go back three hundred years making venom research uniquely suited for such a long term study By analyzing key episodes in the transformation of venom research Schickore is able to draw out the factors that have shaped methods discourse in science About Method shows that methodological advancement throughout history has not been simply a steady progression toward better more sophisticated and improved methodologies of experimentation Rather it was a progression in awareness of the obstacles and limitations that scientists face in developing strategies to probe the myriad unknown complexities of nature The first long term history of this development and of snake venom research About Method offers a major contribution to integrated history and philosophy of science

Unexpected Affinities Zhang Longxi, 2007 East West comparative literature is a field of study that has seen tremendous growth in recent years In this pioneering study renowned scholar Zhang Longxi offers a much needed reappraisal of the thematic and conceptual similarities that unite literary and cultural traditions in the East and West An expanded version of the lectures he gave as part of the Alexander Lectures Series at the University of Toronto in 2005 Unexpected Affinities emphasizes affinity over difference and explores the relationship between East and West in terms of cultural homogeneity with shared literary qualities as its signposts challenging the traditional boundaries of cross cultural study and comparative literature as a discipline Throughout Unexpected Affinities Zhang emphasizes the validity of East West studies through concrete examples and a wide range of references not only to literature but to religious and philosophical texts as well Zhang insists that certain critical insights come solely from the cross cultural perspective of East West studies and that without going beyond the limited horizon of a single literary tradition we will not attain the broad vision of human creativity in all its richness and diversity Clear concise and engaging Unexpected Affinities will appeal to students of comparative literature and Asian studies as well as to readers interested in the global implications of art and culture
