McDermott, 2016-08-19 The Topics Every Medical Physicist Should Know Tutorials in Radiotherapy Physics Advanced Topics with Problems and Solutions covers selected advanced topics that are not thoroughly discussed in any of the standard medical physics texts The book brings together material from a large variety of sources avoiding the need for you to search through and digest the vast research literature The topics are mathematically developed from first principles using consistent notation Clear Derivations and In Depth Explanations The book offers insight into the physics of electron acceleration in linear accelerators and presents an introduction to the study of proton therapy It then describes the predominant method of clinical photon dose computation convolution and superposition dose calculation algorithms It also discusses the Boltzmann transport equation a potentially fast and accurate method of dose calculation that is an alternative to the Monte Carlo method This discussion considers Fermi Eyring's theory which is widely used for electron dose calculations The book concludes with a step by step mathematical development of tumor control and normal tissue complication probability models Each chapter includes problems with solutions given in the back of the book Prepares You to Explore Cutting Edge Research This guide provides you with the foundation to read review articles on the topics It can be used for self study in graduate medical physics and physics residency programs or in vendor training for linacs and treatment planning systems Research on Physics Education E.F. Redish, M. Vicentini, 2004-08-09 Physics Education research is a young field with a strong tradition in many countries However it has only recently received full recognition of its specificity and relevance for the growth and improvement of the culture of Physics in contemporary Society for different levels and populations This may be due on one side to the fact that teaching therefore education is part of the job of university researchers and it has often been implicitly assumed that the competences required for good research activity also guarantee good teaching practice On the other side and perhaps more important is the fact that the problems to be afforded in doing research in education are complex problems that require a knowledge base not restricted to the disciplinary physics knowledge but enlarged to include cognitive science communication science history and philosophy The topics discussed here look at some of the facets of the problem by considering the interplay of the development of cognitive models for learning Physics with some reflections on the Physics contents for contemporary and future society with the analysis of teaching strategies and the role of experiments the issue of assessment and cultural aspects Information is also given on the

R. Gurung, Nancy L. Chick, Aeron Haynie, 2023-07-03 From the Foreword These authors have clearly shown the value in looking for the signature pedagogies of their disciplines Nothing uncovers hidden assumptions about desired knowledge skills and dispositions better than a careful examination of our most cherished practices The authors inspire specialists in other disciplines to do the same Furthermore they invite other colleagues to explore whether relatively new interdisciplinary fields such as Women s Studies and Global Studies have or should have a signature pedagogy consistent with their understanding of what it means to apprentice in these areas Anthony A Ciccone Senior Scholar and Director Carnegie Academy for the Scholarship of Teaching and Learning How do individual disciplines foster deep learning and get students to think like disciplinary experts With contributions from the sciences humanities and the arts this book critically

explores how to best foster student learning within and across the disciplines This book represents a major advance in the Scholarship of Teaching and Learning SoTL by moving beyond individual case studies best practices and the work of individual scholars to focus on the unique content and characteristic pedagogies of major disciplines Each chapter begins by summarizing the SoTL literature on the pedagogies of a specific discipline and by examining and analyzing its traditional practices paying particular attention to how faculty evaluate success Each concludes by the articulating for its discipline the elements of a signature pedagogy that will improve teaching and learning and by offering an agenda for future research Each chapter explores what the pedagogical literature of the discipline suggests are the optimal ways to teach material in that field and to verify the resulting learning Each author is concerned about how to engage students in the ways of knowing the habits of mind and the values used by experts in his or her field Readers will not only benefit from the chapters most relevant to their disciplines As faculty members consider how their courses fit into the broader curriculum and relate to the other disciplines and design learning activities and goals not only within the discipline but also within the broader objectives of liberal education they will appreciate the cross disciplinary understandings this book affords

A Solution to a Pointless Life Albert Amao Soria Ph.D.,2023-04-20 This book empowers the reader to awaken his inner power by providing psychological and metaphysical tools for improving their life Humans should undertake the power dwelling in them and become active co creators of their personal and social environment The book is a necessary component in a materialistic post modern consumeristic society It focuses on removing the self loathing ideas imposed by religious organizations and mass media Moreover it offers a plausible and coherent theory that answers the old honored predicament of finding the true purpose of human existence Blending ideas from philosophers with the popular wisdom of native folklore Occidental and Oriental sacred scriptures sociology metaphysics philosophy existentialism and modern quantum physics this book reveals that humans should actively participate in the awakening of their consciousness Having no purpose in life can

lead people to a deep psychological depression called existential anxiety. Thus ignoring the role of man's importance in the drama of the universe, the lack of a myth or meaning could be tragic and detrimental. Since the dawn of civilization, humans have taken for granted or assumed that they had an inherent purpose in life by being born, which turned out to be a big fallacy. In addition, humans have been brainwashed and domesticated by false ideas, creating a herd mentality by the ruling elite. Under these circumstances, how do we humans find authentic meaning in what seems to be a senseless life? Modern philosophy has become increasingly abstract and separate from human beings, unable to offer positive guidance to ordinary people. Finding a purpose in human existence is the primary motivational force for human existence. The ultimate purpose of human existence is to become a conscious god.
