Ubiquitous Display Environments Antonio Krüger, Tsvi Kuflik, 2012-06-12 Our increasingly smart environments will sense track and model users and provide them with personalized services We can already embed computers in everyday objects such as shirt buttons and pencils objects of all sizes from wristwatches to billboards will soon incorporate high quality flexible displays we have improved access to wireless Internet communication and we are now transitioning from traditional linear to targeted interactive media The convergence of these factors miniaturization display technologies wireless communication and interactive media will allow us to leave our desktop computers and move to a radical computing paradigm the ubiquitous display environment where media and visual content will support a rich variety of display devices that enable users to interact with information artifacts in a seamless manner This is one of the most exciting and important areas of technology development and this book addresses the challenge within the context of an educational and cultural experience This is inherently a multidisciplinary field and the contributions span the related research aspects including system architecture and communications issues and intelligent user interface aspects such as aesthetics and privacy On the scientific side the authors integrate artificial intelligence user modeling temporal and spatial reasoning intelligent user interfaces and user centric design methodologies in their work while on the technological side they integrate mobile and wireless networking infrastructures interfaces group displays and context driven adaptive presentations This book is of value to researchers and practitioners working on all aspects of ubiquitous display environments and we hope it leads to innovations in human education cultural heritage appreciation and scientific development

Pervasive Displays Nigel Davies, Sarah Clinch, Florian Alt, 2022-05-31 Fueled by falling display hardware costs and rising demand digital signage and pervasive displays are becoming ever more ubiquitous Such systems have traditionally been used for advertising and information dissemination with digital signage commonplace in shopping malls airports and public spaces While advertising and broadcasting announcements remain important applications developments in sensing and interaction technologies are enabling entirely new classes of display applications that tailor content to the situation and audience of the display As a result signage systems are beginning to transition from simple broadcast systems to rich platforms for communication and interaction In this lecture we provide an introduction to this emerging field for researchers and practitioners interested in creating state of the art pervasive display systems We begin by describing the history of pervasive display research providing illustrations of key systems from pioneering work on supporting collaboration to contemporary systems designed for personalized information delivery We then consider what the near future might hold for display networks describing a series of compelling applications that are being postulated for future display networks Creating such systems raises a wide range of challenges and requires designers to make a series of important trade offs We dedicate four chapters to key aspects of pervasive display design audience engagement display interaction system software and system evaluation These chapters provide an overview of current thinking in each area Finally we present a series of case studies of display systems and our concluding remarks
