Understanding Technological Innovation A Socio Technical Approach:

Understanding Technological Innovation Patrice Flichy, 2008-01-01 Researchers and students in the management of innovation will find in this book an analytical framework that articulates technological innovation processes and the creation of new markets. The multiplication of examples and cases helps the reader in better grasping the different aspects of the proposed framework. The focus on information and communication technologies is of high relevance; it enables the reader to put present developments in perspective and this is especially relevant when discussing ascending innovation and the role of users and uses. Philippe Laredo, Universities of Paris Est and Manchester, Coordinator of the European PRIME Network of Excellence. Patrice Flichy takes the reader on a fascinating tour of the literature on technological innovation. Innovation is situated within the frames of functioning and use, offering rich insights into the strategies, tactics, improvisations and learning which occur through time. He emphasises the dreams and musings of inventors, novelists and the popular media to show how they mediate new technological frames of reference. This book offers an excellent synthesis of the literature and an original historical account of innovation with special reference to information and communication technologies. Robin Mansell, London School of Economics and Political Science, UK. In *Understanding Technological Innovation*, Patrice Flichy's interest is in the genesis of technology. He describes the perspectives and interpretive schemes deployed by historians, sociologists and economists in attempts to understand the determinants, including chance, of the particular forms of products and systems that have come to dominate the market and play so important a role, some would claim dominant, in our lives. It is rare to find in one volume so informed a critique of the essential writings of historians of technology, contemporary sociologists and economic historians. His own special interest lies in the development of information technology and he puts his expertise to good use in revealing and contrasting the different perspectives and claims of these three schools. Louis L. Bucciarelli, Massachusetts Institute of Technology, US. Working at the interface between interactionist sociology, history and economics, Flichy provides us with a language for charting the evolution of new technologies as generic technical capabilities are explored, perhaps inspired by visions of societal change and become stabilised and attached to particular conceptions of use. He offers us an integrated perspective on technological innovation, addressing the influence of history and social context whilst remaining open to the often unanticipated dynamism and surprises that may surround both these trajectories. This book will provide a thoughtful contribution to current debates. The critical literature review will provide a rich and convenient source for advanced teaching and research training. Robin Williams, The University of Edinburgh, UK. How do the social sciences address the question of innovation and the relationship between technology and use? This is the core point of this book, which examines critically diverse works in sociology, history, economics and anthropology in order to formulate a new approach. This reflection is essentially of a general nature, though the cases used to illustrate the analysis are drawn primarily from the field of ICT. Patrice Flichy studies how the socio-technological actions of the different actors, particularly designers,

and users are organized within the same frames of reference He also introduces a new element into the model by demonstrating how time is involved in technological choices Understanding Technological Innovation will be essential reading for advanced teaching and research training in the fields of science and technology studies and media and communication studies

inhabit Taken together the 21 chapters provide scholarly argued responses to the following questions Why are these conversations important for engineering for social sciences and for the humanities Are there key places in practice in the curriculum and in institutions where these conversations can develop best What are the barriers to successful conversations What proposals can be made for deepening these conversations for the future How would we know that the conversations have come of age and who gets to decide The book appeals to scholarly audiences that come together through their work in engineering education and practice The chapters of the book probes and access the meetings and conversations and they explore new avenues for strengthening dialogues that transcend narrow disciplinary confines and divisions The volume offers a rich collection of descriptive resources and theoretical tools that will be useful for researchers of engineering practices and for those aiming to reshape the engineering lifeworld through new policies The book depicts the current state of the art of the most visible SSH contributions to shaping engineering practices as well as a map of research gaps and policy problems that still need to be explored Dr Ir Lavinia Marin TU Delft Electrical Engineering and Philosophy

Zooland Irus Braverman, 2012-11-28 This book takes a unique stance on a controversial topic zoos Zoos have their ardent supporters and their vocal detractors And while we all have opinions on what zoos do few people consider how they do it Irus Braverman draws on more than seventy interviews conducted with zoo managers and administrators as well as animal activists to offer a glimpse into the otherwise unknown complexities of zooland Zooland begins and ends with the story of Timmy the oldest male gorilla in North America to illustrate the dramatic transformations of zoos since the 1970s Over these decades modern zoos have transformed themselves from places created largely for entertainment to globally connected institutions that emphasize care through conservation and education Zoos naturalize their spaces classify their animals and produce spectacular experiences for their human visitors Zoos name register track and allocate their animals in global databases Zoos both abide by and create laws and industry standards that govern their captive animals Finally zoos intensely govern the reproduction of captive animals carefully calculating the life and death of these animals deciding which of them will be sustained and which will expire Zooland takes readers behind the exhibits into the world of zoo animals and their caretakers And in so doing it turns its gaze back on us to make surprising interconnections between our understandings of the human and the nonhuman
