The Oxford Handbook of Perceptual Organization Johan Wagemans, 2015 Perceptual organization comprises a wide range of processes such as perceptual grouping figure ground organization filling in completion and perceptual switching The Oxford Handbook of Perceptual Organization provides a broad and extensive review of the current literature written in an accessible form for scholars and students

Perception beyond Inference Liliana Albertazzi, Gert J. Van Tonder, Dhanraj Vishwanath, 2023-09-19 Proposing a new paradigm for perceptual science that goes beyond standard information theory and digital computation This book breaks with the conventional model of perception that views vision as a mere inference to an objective reality on the basis of inverse optics The authors offer the alternative view that perception is an expressive and awareness generating process Perception creates semantic information in such a way as to enable the observer to deal efficaciously with the chaotic and meaningless structure present at the physical boundary between the body and its surroundings Vision is intentional by its very nature visual qualities are essential and real providing an aesthetic and meaningful interface to the structures of physics

and the state of the brain This view brings perception firmly in line with ethology and modern evolutionary biology and suggests new approaches in all disciplines that study or require an understanding of the ontology of mind The book is the joint effort of a multidisciplinary group of authors Topics covered include the relationships among stimuli neuronal processes and visual awareness After considering the mind dependent growing of information the book treats time and dynamics color shape and space language and perception perception art and design Handbook of Experimental Phenomenology Liliana Albertazzi, 2013-03-15 While the scientific study of vision is well advanced a universal theory of qualitative visual appearances texture shape colour and so on is still lacking This interdisciplinary handbook presents the work of leading researchers around the world who have taken up the challenge of defining and formalizing the field of experimental phenomenology Presents and discusses a new perspective in vision science and formalizes a field of study that will become increasingly significant to researchers in visual science and beyond The contributors are outstanding scholars in their fields with impeccable academic credentials including Jan J Koenderink Irving Biederman Donald Hoffmann Steven Zucker and Nikos Logothetis Divided into five parts Linking Psychophysics and Qualities Qualities in Space Time and Motion Appearances Measurement and Qualities Science and Aesthetics of Appearances Each chapter will have the same structure consisting of topic overview historical roots debate new perspective methods results and recent developments Theory and Applications of Ontology: Philosophical Perspectives Roberto Poli, Johanna Seibt, 2010-08-28 Ontology was once understood to be the philosophical inquiry into the structure of reality the analysis and categorization of what there is Recently however a field called ontology has become part of the rapidly growing research industry in information technology The two fields have more in common than just their name Theory and Applications of Ontology is a two volume anthology that aims to further an informed discussion about the relationship between ontology in philosophy and ontology in information technology It fills an important lacuna in cutting edge research on ontology in both fields supplying stage setting overview articles on history and method presenting directions of current research in either field and highlighting areas of productive interdisciplinary contact Theory and Applications of Ontology Philosophical Perspectives presents ontology in philosophy in ways that computer scientists are not likely to find elsewhere The volume offers an overview of current research traditions in ontology contrasting analytical phenomenological and hermeneutic approaches It introduces the reader to current philosophical research on those categories of everyday and scientific reasoning that are most relevant to present and future research in information technology **Immanent Realism** Liliana Albertazzi, 2006 In many respects Brentano conducted pioneering analyses of problems that are currently in the focus of cognitive science and artificial intelligence from the problem of reference to that of representation from the problem of categorial classification to ontology and the cognitive analysis of natural language Brentano in fact dealt with and wrote on questions concerning the auditory stream temporal apprehension visual perception continua point of view three dimensional construction of phenomenal objects intentionality

imagery and conceptual space considering these pertaining to a metaphysical enquiry Moreover Brentano displayed clear awareness of the complexity of problems and of the interrelations among different areas of inquiry From this point of view his theory however complex offers elements for the treatment of problems currently under investigation Brentano s work is an antidote against physicalism and logicism which dominated the 20th century epistemology and as such appears to be a good philosophy candidate for cognitive science A set of knotty questions are implied in the very title of Brentano s work *Psychology from an empirical standpoint* To solve them Albertazzi guides us systematically through Brentano s life and works investigating into the inherent complexity of both his view of mental life and the related methodology In so doing she discloses a number of threads into the open texture of modern philosophy of mind Lia Formigari Ordinary professor of Philosophy of Language La Sapienza Rome Italy Mathematical Models of Perception and Cognition Volume I Joseph W. Houpt, Leslie M. Blaha, 2016-05-20 In this two volume festschrift contributors explore the theoretical developments Volume I and applications Volume II in traditional cognitive psychology domains and model other areas of human performance that benefit from rigorous mathematical approaches It brings together former classmates students and colleagues of Dr James T Townsend a pioneering researcher in the field since the early 1960s to provide a current overview of mathematical modeling in psychology Townsend s research critically emphasized a need for rigor in the practice of cognitive modeling and for providing mathematical definition and structure to ill defined psychological topics The research captured demonstrates how the interplay of theory and application bridged by rigorous mathematics can move cognitive modeling forward *After Whitehead* Michel Weber, 2013-05-02 When Rescher s *Process Metaphysics* 1996 was published it was widely acclaimed as a major step towards the academic recognition of a mode of thought that has otherwise been confined within sharp scholarly boundaries Of course it is not an easy book despite its stylistic clarity it remains the complex outcome of a life s work in most areas of philosophy The goal of the present volume is to systematically unfold the vices and virtues of *Process Metaphysics* and thereby to specify the contemporary state of affairs in process thought To do so the editor has gathered one focused contribution per chapter each paper addressing specifically and explicitly its assigned chapter and seeking to promote a dialogue with Rescher In addition the volume features Rescher s replies to the papers Handbook of Whiteheadian Process Thought Michel Weber, 2013-04-30 Gathering 115 entries written by 101 internationally renowned experts in their fields the *Handbook of Whiteheadian Process Thought* aims at canvassing the current state of knowledge in Whiteheadian scholarship and at identifying promising directions for future investigations through internal cross elucidation and external interdisciplinary development Two kinds of entries are weaved together in order to interpret Whitehead *secundum* Whitehead and to read him from the vantage point of interdisciplinary and crossdisciplinary research The thematic entries provide i a broad contextualisation of the issue at stake ii a focus on Whitehead s treatment if any or of a possible Whiteheadian treatment of the issue iii a history of relevant scholarship iv a personal assessment by the Author The

biographical entries provide i a brief vita of the targeted thinker ii a sketch of his/her categories relevant to the Whiteheadian scholarship iii a personal assessment of the actual or possible Whiteheadian semantic transfer to or from the thinker
