Uniform Central Limit Theorems R. M. Dudley, 1999-07-28 This treatise by an acknowledged expert includes several topics not found in any previous book

Advanced Lectures on Machine Learning Shahar Mendelson, Alexander J. Smola, 2003-01-31 This book presents revised reviewed versions of lectures given during the Machine Learning Summer School held in Canberra Australia in February 2002 The lectures address the following key topics in algorithmic learning statistical learning theory kernel methods boosting reinforcement learning theory learning association rule learning and learning linear classifier systems Thus the book is well balanced between classical topics and new approaches in machine learning Advanced students and lecturers will find this book a coherent in depth overview of this exciting area while researchers will use this book as a valuable source of reference

An Introduction to Computational Stochastic PDEs Gabriel J. Lord, Catherine E. Powell, Tony Shardlow, 2014-08-11 This book gives a comprehensive introduction to numerical methods and analysis of stochastic processes random fields and stochastic differential equations and offers graduate students and researchers powerful tools for understanding uncertainty quantification for risk analysis Coverage includes traditional stochastic ODEs with white noise forcing strong and weak approximation and the multi level Monte Carlo method Later chapters apply the theory of random fields to the numerical solution of elliptic PDEs with correlated random data discuss the Monte Carlo method and introduce stochastic Galerkin finite element methods Finally stochastic parabolic PDEs are developed Assuming little previous exposure to probability and statistics theory is developed in tandem with state of the art computational methods through worked examples exercises theorems and proofs The set of MATLAB codes included and downloadable allows readers to perform computations themselves and solve the test problems discussed Practical examples are drawn from finance mathematical biology neuroscience fluid flow modelling and materials science

Upper and Lower Bounds for Stochastic Processes Michel Talagrand, 2014-02-12 The book develops modern methods and in particular the generic chaining to bound stochastic processes This methods allows in particular to get optimal bounds for Gaussian and Bernoulli processes Applications are given to stable processes infinitely divisible processes matching theorems the convergence of random Fourier series of orthogonal series and to functional analysis The complete solution of a number of classical problems is given in complete detail and an ambitious program for future research is laid out

The Generic Chaining Michel Talagrand, 2005-03-17 The fundamental question of characterizing continuity and boundedness of Gaussian processes goes back to Kolmogorov After contributions by R Dudley and X Fernique it was solved by the author This book provides an overview of generic chaining a completely natural variation on the ideas of Kolmogorov It takes the reader from the first principles to the edge of current knowledge and to the open problems that remain in this domain

Lectures on Logarithmic Algebraic Geometry Arthur Ogus, 2018-11-08 A self contained introduction to logarithmic geometry a key tool for analyzing compactification and degeneration in algebraic geometry
