In July 1818 one hundred years ago the first number of the American Journal of Science and Arts was given to the public This is the only scientific periodical in this country to maintain an uninterrupted existence since that early date and this honor is shared with hardly more than half a dozen other independent scientific periodicals in the world at large Similar publications of learned societies for the same period are also very few in number It is interesting on the occasion of this centenary to glance back at the position of science and scientific literature in the world s intellectual life in the early part of the nineteenth century and to consider briefly the marvelous record of combined scientific and industrial progress of the hundred years following subjects to be handled in detail in the succeeding chapters It is fitting also that we should recall the man who founded the Journal the conditions under which he worked and the difficulties he encountered Finally we must review but more briefly the subsequent history of what has so often been called after its founder Silliman s Journal The nineteenth century and particularly the hundred years in which we are now interested must always stand out in the history of the world as the period which has combined the greatest development in all departments of science with the most extraordinary industrial progress It was not until this century that scientific investigation used to their full extent the twin methods of observation and experiment In cases too numerous to mention they have given us first a tentative hypothesis then through the testing and correcting of the hypothesis by newly acquired data an accepted theory has been arrived at finally by the same means carried further has been established one of nature s laws

Early Science Looking far back into the past it seems surprising that science should have had so late a growth but the wonderful record of man s genius in the monuments he erected and in architectural remains shows that the working of the human mind found expression first in art and further man also turned to literature So far as man s thought was constructive the early results were systems of philosophy and explanations of the order of things as seen from within not as shown by nature herself We date the real beginning of science with the Greeks but it was the century that preceded Aristotle that saw the building of the Parthenon and the sculptures of Phidias Even the great Aristotle himself 384 322 B C though he is sometimes called the founder of natural history was justly accused by Lord Bacon many centuries later of having formed his theories first and then to have forced the facts to agree with them The bringing together of facts through observation alone began to be sure very early for it was the motion of the sun moon and stars and the relation of the earth to them that first excited interest and especially in the countries of the East led to the accumulation of data as to the motion of the planets of

comets and the occurrence of eclipses But there was no co rdination of these facts and they were so involved in man s superstition as to be of little value In passing however it is worthy of mention that the Chinese astronomical data accumulated more than two thousand years before the Christian era have in trained hands yielded results of no small significance *The Evolution of Naval Armament* Frederick Leslie Robertson,1921 *The Measurement of Steady and Fluctuating Temperatures* Robert Royds,1921 *Experimental and Theoretical Applications of Thermodynamics to Chemistry* Walther i.e. Hermann Walther Nernst,1913 *Enthalpy and Internal Energy* Emmerich Wilhelm,Trevor M Letcher,2017-09-08 Containing the very latest information on all aspects of enthalpy and internal energy as related to fluids this book brings all the information into one authoritative survey in this well defined field of chemical thermodynamics Written by acknowledged experts in their respective fields each of the 26 chapters covers theory experimental methods and techniques and results for all types of liquids and vapours These properties are important in all branches of pure and applied thermodynamics and this vital source is an important contribution to the subject hopefully also providing key pointers for cross fertilization between sub areas
