Weak Chaos And Quasi Regular Patterns Cambridge Nonlinear Science Series:

Weak Chaos and Quasi-Regular Patterns George M. Zaslavsky, 1992-08-06 This book the first in the Cambridge Nonlinear Science Series presents the fundamentals of chaos theory in conservative systems providing a systematic study of the theory of transitional states of physical systems which lie between deterministic and chaotic behaviour From Hamiltonian Chaos to Complex Systems Xavier Leoncini, Marc Leonetti, 2013-07-14 From Hamiltonian Chaos to Complex Systems A Nonlinear Physics Approach collects contributions on recent developments in non linear dynamics and statistical physics with an emphasis on complex systems This book provides a wide range of state of the art research in these fields The unifying aspect of this book is demonstration of how similar tools coming from dynamical systems nonlinear physics and statistical dynamics can lead to a large panorama of research in various fields of physics and beyond most notably with the perspective of application in complex systems Nonlinear Ocean Waves and the Inverse Scattering Transform Alfred Osborne, 2010-04-07 For more than 200 years the Fourier Transform has been one of the most important mathematical tools for understanding the dynamics of linear wave trains Nonlinear Ocean Waves and the Inverse Scattering Transform presents the development of the nonlinear Fourier analysis of measured space and time series which can be found in a wide variety of physical settings including surface water waves internal waves and equatorial Rossby waves This revolutionary development will allow hyperfast numerical modelling of nonlinear waves greatly advancing our understanding of oceanic surface and internal waves Nonlinear Fourier analysis is based upon a generalization of linear Fourier analysis referred to as the inverse scattering transform the fundamental building block of which is a generalized Fourier series called the Riemann theta function Elucidating the art and science of implementing these functions in the context of physical and time series analysis is the goal of this book Presents techniques and methods of the inverse scattering transform for data analysis Geared toward both the introductory and advanced reader venturing further into mathematical and numerical analysis Suitable for classroom teaching as well as research Hamiltonian Mechanics John Seimenis, 2013-11-11 This volume contains invited papers and contributions delivered at the International Conference on Hamiltonian Mechanics Integrability and Chaotic Behaviour held in Torun Poland during the summer of 1993 The conference was supported by the NATO Scientific and Environmental Affairs Division as an Advanced Research Workshop In fact it was the first scientific conference in all Eastern Europe supported by NATO The meeting was expected to establish contacts between East and West experts as well as to study the current state of the art in the area of Hamiltonian Mechanics and its applications I am sure that the informal atmosphere of the city of Torun the birthplace of Nicolaus Copernicus stimulated many valuable scientific exchanges The first idea for this conference was carried out by Prof Andrzej J Maciejewski and myself more than two years ago during his visit in Greece It was planned for about forty well known scientists from East and West At that time participation of a scientist from Eastern Europe in an Organising Committee of a NATO Conference was not allowed But always there is the first time Our plans for such a small

conference as a first attempt in the new European situation the Europe without borders quickly passed away The names of our invited speakers authorities in their field were a magnet for many colleagues from all over the world

Perspectives and Problems in Nonlinear Science Ehud Kaplan, Jerrold E. Marsden, Katepalli R. Sreenivasan, 2012-12-06 Lawrence Sirovich will turn seventy on March 1 2003 Larry's academic life of over 45 years at the Courant Institute Brown University Rockefeller University and the Mount Sinai School of Medicine has touched many people and several disciplines from fluid dynamics to brain theory His contributions to the kinetic theory of gases methods of applied mathematics theoretical fluid dynamics hydrodynamic turbulence the biophysics of vision and the dynamics of neuronal populations represent the creative work of an outstanding scholar who was stimulated mostly by insatiable curiosity As a scientist Larry has consistently offered fresh outlooks on classical and difficult subjects and moved into new fields effortlessly He delights in what he knows and does and sets no artificial boundaries to the range of his inquiry Among the more than fifty or so Ph D students and post docs that he has mentored many continue to make first rate contributions themselves and hold academic positions in the US and elsewhere Larry's scientific collaborators are numerous and distinguished Those of us who have known him well will agree that Larry's charm above all is his taste wit and grace under fire Larry has contributed immensely to mathematics publishing He began his career with Springer by founding the Applied Mathematical Sciences series together with Fritz John and Joe LaSalle some 30 years ago Later he co founded the Texts in Applied Mathematics series and more recently the Interdisciplinary Applied Mathematics series

Lowenstein, 2013-07-30 Pseudochaotic Kicked Oscillators Renormalization Symbolic Dynamics and Transport presents recent developments in pseudochaos which is concerned with complex branching behaviors of dynamical systems at the interface between orderly and chaotic motion Pseudochaos is characterized by the trapping of orbits in the vicinity of self similar hierarchies of islands of stability producing phase space displacements which increase asymptotically as a power of time This monograph is a thorough self contained investigation of a simple one dimensional model a kicked harmonic oscillator which exhibits pseudochaos in its purest form It is intended for graduate students and researchers in physics and applied mathematics as well as specialists in nonlinear dynamics Dr John H Lowenstein is a Professor Emeritus in the Department of Physics at New York University USA
