Representation of the British Suffrage Movement Kat Gupta, 2015-11-19 Focussing on The Times this

monograph uses corpus linguistics to examine how suffrage campaigners different ideologies were conflated in the newspaper over a crucial time period for the movement 1908 to 1914 leading up to the Representation of the People Act in 1918 Looking particularly at representations of suffrage campaigners support of or opposition to military action Gupta uses a range of methodological approaches drawn from corpus linguistics discourse analysis and CDA These include collocation analysis examination of consistent significant collocates and van Leeuwen's taxonomy of social actors The book offers an innovative insight into contemporary public understanding of the suffrage campaign with implications for researchers examining large complex protest movements *Data-Driven Learning for the Next Generation* Peter

Crosthwaite, 2019-10-21 Despite advancements in and availability of corpus software in language classrooms facilitating data driven learning DDL the use of such methods with pre tertiary learners remains rare This book specifically explores the affordances of DDL for younger learners testing its viability with teachers and students at the primary and secondary years of schooling It features eminent and up and coming researchers from Europe Asia and Australasia who seek to address best practice in implementing DDL with younger learners while providing a wealth of empirical findings and practical DDL activities ready for use in the pre tertiary classroom Divided into three parts the volume's first section focuses on overcoming emerging challenges for DDL with younger learners including where and how DDL can be integrated into pre tertiary curricula as well as potential barriers to this integration It then considers new cutting edge innovations in corpora and corpus software for use with younger learners in the second section before reporting on actual DDL studies performed with younger learners and or their teachers at the primary and secondary levels of education This book will appeal to post graduate students academics and researchers with interests in corpus linguistics second language acquisition primary and secondary literacy education and language and educational technologies **Keywords in the Press: The New Labour**

Years Lesley Jeffries, Brian Walker, 2017-11-16 Building on Raymond Williams iconic Keywords released in 1975 Jeffries and Walker show how some pivotal words significantly increased in use and evolved in meaning during the years of the New Labour project Focussing on print news media this book establishes a set of socio political keywords for the Blair Years and demonstrates how their evolving meanings are indicative of the ideological landscape in Britain at that time and the extent to which the cultural hegemony of the New Labour project influenced the language of the commentariat Combining corpus linguistic approaches with critical stylistics the authors conduct an analysis of two newspaper corpora using computational tools Looking closely at textually constructed meanings within the data their investigation of the keywords has a qualitative focus and sets out a clear methodology for combining corpus approaches with systematic co textual analysis *Web Corpus Construction* Roland Schäfer, 2013-07-22 The World Wide Web constitutes the largest existing source of texts written in a great variety of languages A feasible and sound way of exploiting this data for linguistic research is to compile a static corpus for a given language There are several advantages of this approach i Working with such corpora obviates the problems

encountered when using Internet search engines in quantitative linguistic research such as non transparent ranking algorithms ii Creating a corpus from web data is virtually free iii The size of corpora compiled from the WWW may exceed by several orders of magnitudes the size of language resources offered elsewhere iv The data is locally available to the user and it can be linguistically post processed and queried with the tools preferred by her him This book addresses the main practical tasks in the creation of web corpora up to giga token size Among these tasks are the sampling process i e web crawling and the usual cleanups including boilerplate removal and removal of duplicated content Linguistic processing and problems with linguistic processing coming from the different kinds of noise in web corpora are also covered Finally the authors show how web corpora can be evaluated and compared to other corpora such as traditionally compiled corpora For additional material please visit the companion website sites.morganclaypool.com/wcc Table of Contents Preface Acknowledgments Web Corpora Data Collection Post Processing Linguistic Processing Corpus Evaluation and Comparison Bibliography Authors Biographies
