Web Information Retrieval Stefano Ceri, Alessandro Bozzon, Marco Brambilla, Emanuele Della Valle, Piero Fraternali, Silvia Quarteroni, 2013-08-30 With the proliferation of huge amounts of heterogeneous data on the Web the importance of information retrieval IR has grown considerably over the last few years Big players in the computer industry such as Google Microsoft and Yahoo are the primary contributors of technology for fast access to Web based information and searching capabilities are now integrated into most information systems ranging from business management software and customer relationship systems to social networks and mobile phone applications Ceri and his co authors aim at taking their readers from the foundations of modern information retrieval to the most advanced challenges of Web IR To this end their book is divided into three parts The first part addresses the principles of IR and provides a systematic and compact description of basic information retrieval techniques including binary vector space and probabilistic models as well as natural language search processing before focusing on its application to the Web Part two addresses the foundational aspects of Web IR by discussing the general architecture of search engines with a focus on the crawling and indexing processes describing link analysis methods specifically Page Rank and HITS addressing recommendation and diversification and finally presenting advertising in search the main source of revenues for search engines The third and final part describes advanced aspects of Web search each chapter providing a self contained up to date survey on current Web research directions Topics in this part include meta search and multi domain search semantic search search in the context of multimedia data and crowd search The book is ideally suited to courses on information retrieval as it covers all Web independent foundational aspects Its presentation is self contained and does not require prior background knowledge It can also be used in the context of classic courses on data management allowing the instructor to cover both structured and unstructured data in various formats Its classroom use is facilitated by a set of slides which can be downloaded from www.searchcomputing.org **Information Retrieval** Ayse Goker, John Davies, 2009-12-15 This book is an essential reference to cutting edge issues and future directions in information retrieval Information retrieval IR can be defined as the process of representing managing searching retrieving and presenting information Good IR involves understanding information needs and interests developing an effective search technique system presentation distribution and delivery The increased use of the Web and wider availability of information in this environment led to the development of Web search engines This change has brought fresh challenges to a wider variety of users needs tasks and types of information Today search engines are seen in enterprises on laptops in individual websites in library catalogues and elsewhere Information Retrieval Searching in the 21st Century focuses on core concepts and current trends in the field This book focuses on Information Retrieval Models User centred Evaluation of Information Retrieval Systems Multimedia Resource Discovery Image Users Needs and Searching Behaviour Web Information Retrieval Mobile Search Context and Information Retrieval Text Categorisation and Genre in Information Retrieval Semantic Search

Metzler, 2011-09-18 Commercial Web search engines such as Google Yahoo and Bing are used every day by millions of people across the globe With their ever growing refinement and usage it has become increasingly difficult for academic researchers to keep up with the collection sizes and other critical research issues related to Web search which has created a divide between the information retrieval research being done within academia and industry Such large collections pose a new set of challenges for information retrieval researchers In this work Metzler describes highly effective information retrieval models for both smaller classical data sets and larger Web collections In a shift away from heuristic hand tuned ranking functions and complex probabilistic models he presents feature based retrieval models The Markov random field model he details goes beyond the traditional yet ill suited bag of words assumption in two ways First the model can easily exploit various types of dependencies that exist between query terms eliminating the term independence assumption that often accompanies bag of words models Second arbitrary textual or non textual features can be used within the model As he shows combining term dependencies and arbitrary features results in a very robust powerful retrieval model In addition he describes several extensions such as an automatic feature selection algorithm and a query expansion framework The resulting model and extensions provide a flexible framework for highly effective retrieval across a wide range of tasks and data sets A Feature Centric View of Information Retrieval provides graduate students as well as academic and industrial researchers in the fields of information retrieval and Web search with a modern perspective on information retrieval modeling and Web searches

Google's PageRank and Beyond Amy N. Langville, Carl D. Meyer, 2011-07-01 Why doesn't your home page appear on the first page of search results even when you query your own name How do other web pages always appear at the top What creates these powerful rankings And how The first book ever about the science of web page rankings Google's PageRank and Beyond supplies the answers to these and other questions and more The book serves two very different audiences the curious science reader and the technical computational reader The chapters build in mathematical sophistication so that the first five are accessible to the general academic reader While other chapters are much more mathematical in nature each one contains something for both audiences For example the authors include entertaining asides such as how search engines make money and how the Great Firewall of China influences research The book includes an extensive background chapter designed to help readers learn more about the mathematics of search engines and it contains several MATLAB codes and links to sample web data sets The philosophy throughout is to encourage readers to experiment with the ideas and algorithms in the text Any business seriously interested in improving its rankings in the major search engines can benefit

Jain,2013-04-17 This research volume presents a sample of recent contributions related to the issue of quality assessment for Web Based information in the context of information access retrieval and filtering systems The advent of the Web and the uncontrolled process of documents generation have raised the problem of declining quality assessment to information on the Web by considering both the nature of documents texts images video sounds and so on the genre of documents news geographic information ontologies medical records products records and so on the reputation of information sources and sites and last but not least the actions performed on documents content indexing retrieval and ranking collaborative filtering and so on The volume constitutes a compendium of both heterogeneous approaches and sample applications focusing specific aspects of the quality assessment for Web based information for researchers PhD students and practitioners carrying out their research activity in the field of Web information retrieval and filtering Web information mining information quality representation and management **Effective Information Retrieval from the Internet** Alison Stacey,Adrian Stacey,2004-07-31 Effective Information Retrieval from the Internet discusses practical strategies which enable the advanced web user to locate information effectively and to form a precise evaluation of the accuracy of that information Although the book provides a brief but thorough review of the technologies which are available for these purposes most of the book concerns practical future proof techniques which are independent of changes in the tools available For example the book covers how to retrieve salient information quickly how to remove or compensate for bias and tuition of novice Internet users Importantly the book enables readers to develop strategies which will continue to be useful despite the rapidly evolving state of the Internet and Internet technologies it is not about technological tricks Enables readers to be aware of and compensate for bias and errors which are ubiquitous on the Internet Provides contemporary information on the deficiencies in web skills of novice users as well as practical techniques for teaching such users *Advances in Information Retrieval* Fabrizio Sebastiani,2003-04-08 This book constitutes the refereed proceedings of the 25th European Conference on Information Retrieval Research ECIR 2003 held in Pisa Italy in April 2003 The 31 revised full papers and 16 short papers
