Hollow Core Optical Fibre Based Gas Discharge Laser Systems Adrian

Love, 2018-06-18 The research in this book represents the culmination of a drive to build the first discharge gas laser unencumbered by the effects of diffraction This breakthrough has been achieved through careful implementation of a

discharge within a hollow core optical fibre and by developing measurement and analysis techniques to demonstrate laser action in an experimental optical cavity Gas lasers were amongst the earliest laser types to be demonstrated and commercialised but it was recognised that noble gas lasers were limited by the minimum bore diameter of the laser tube which is set by diffraction The advent in 2011 of hollow optical fibres with optical and physical properties suitable for gas discharge lasers opened up the opportunity to break this diffraction limit Using a mixture of helium and xenon gas lasing in the mid infrared range was achieved using a 100 μ m core flexible hollow optical fibre which at 1m long is several hundred times the diffraction limited Rayleigh length

Lasers and Optoelectronics Anil K. Maini, 2013-08-05 With emphasis on the physical and engineering principles this book provides a comprehensive and highly accessible treatment of modern lasers and optoelectronics Divided into four parts it explains laser fundamentals types of lasers laser electronics optoelectronics and laser applications covering each of the topics in their entirety from basic fundamentals to advanced concepts Key features include exploration of technological and application related aspects of lasers and optoelectronics detailing both existing and emerging applications in industry medical diagnostics and therapeutics scientific studies and Defence simple explanation of the concepts and essential information on electronics and circuitry related to laser systems illustration of numerous solved and unsolved problems practical examples chapter summaries self evaluation exercises and a comprehensive list of references for further reading This volume is a valuable design guide for R D engineers and scientists engaged in design and development of lasers and optoelectronics systems and technicians in their operation and maintenance The tutorial approach serves as a useful reference for under graduate and graduate students of lasers and optoelectronics also PhD students in electronics optoelectronics and physics
