Meeting the Challenges to Measurement in an Era of Accountability Henry Braun, 2016-01-29 Under pressure and support from the federal government states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves The focus thus far has been on test scores in those subject areas where there is a sequence of

consecutive tests such as in mathematics or English language arts with a focus on grades 4-8. Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district. Comparatively little has been written about the measurement of achievement in the other grades and subjects. This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all. It addresses traditional end-of-course tests as well as alternative measures such as portfolios, exhibitions, and student learning objectives. In each case, issues related to design and development, psychometric considerations, and validity challenges are covered from both a generic and a content-specific perspective. The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research-based applications of educational measurement and assessment. Edited by leading experts, these books are comprehensive and practical resources on the latest developments in the field. The Open Access version of this book is available at <http://www.taylorfrancis.com> and has been made available under a Creative Commons Attribution-NonCommercial-NoDerivatives 4.0 license.

Technology-Assisted Language Assessment in Diverse Contexts Karim Sadeghi, 2022-12-30. This timely collection explores the role of digital technology in language education and assessment during the COVID-19 pandemic. It recognises the unique pressures which the COVID-19 pandemic placed on assessment in language education and examines the forced shift in assessment strategies to go online, the existing shortfalls, as well as unique affordances of technology-assisted L2 assessment. By showcasing international examples of successful digital and computer-assisted proficiency and skills testing, the volume addresses theoretical and practical concerns relating to test validity, reliability, ethics, and student experience in a range of testing contexts. Particular attention is given to identifying lessons and implications for future research and practice and the challenges of implementing unplanned computer-assisted language assessment during a crisis. Insightfully unpacking the lessons learned from COVID and its impact on the acceleration of the shift towards online course and assessment delivery, it offers important guidelines for navigating assessment in different instructional settings in times of crisis. It will appeal to scholars, researchers, educators, and faculty with interests in educational measurement, digital education, and technology and language assessment and testing.
