Sonochemistry Suresh C. Ameta, Rakshit Ameta, Garima Ameta, 2018-06-13. Traditionally, heat and light are thought of as energy sources to drive a particular chemical reaction, but now ultrasound is a promising energy source for this purpose. The collapse of a bubble generates a wide range of high temperatures and pressures, and therefore, the use of ultrasound has a considerable potential in chemical and allied sciences. Ultrasound-assisted reactions are green and economically viable alternatives to conventional techniques. This new volume presents a complete picture of ultrasound-assisted reactions and technologies that can be used in organic synthesis, polymer synthesis, and degradation, nanomaterials, wastewater treatment, food ingredients, and products, pharmaceutical applications, bioenergy applications, and more. This volume aims to shed light on the diversified applications of ultrasound and its significant role as a green chemical pathway. Sonochemistry deals with the effect of ultrasonic waves on chemical systems. It has green value because of non-hazardous acoustic radiation and is therefore duly recognized as a green chemistry by

synthetic chemists as well as environmentalists There is no direct interaction of ultrasound with molecular species but the observed chemical and physical effects of ultrasound are due to the cavitation collapse which produces drastic conditions of temperature and pressure locally It induces the formation of various chemical species which cannot be easily attained under conventional conditions Sometimes these species are responsible for driving towards an unusual reactivity in molecular entities This book *Sonochemistry An Emerging Green Technology* provides the complete development of sonochemistry starting with an introduction and basic concepts of sonochemistry and proceeding on to different types of sonochemical reactions instrumentation use of ultrasound in driving particular chemical reactions and its applications in various fields such as polymer synthesis decontamination of water and wastewater preparation of nanomaterials food technology pharmaceutical sciences etc The book also briefly discusses some areas that utilize ultrasounds of different frequencies These include food products and their processing anaerobic digestion of waste and medical applications such as ultrasonography sonodynamic therapy drug delivery etc Sonochemistry will be successfully used on an industrial scale in pharmaceutical drugs polymers nanomaterials food technology material science biogas production etc in years to come and will be an established green chemical technology of the future
