population whose very existence and livelihood are closely linked to their physical environment Professor Vaughan Lowe underlines in Chapter Four the basis for the selection of the Nordic countries and Russia as the focus of the book The co operation between these States provides a blueprint for watercourse co operation in other regions of the world As such it will appeal to both practitioners and academics alike Professor Malgosia Fitzmaurice Department of Law Queen Mary University of London is Secretary of the International Committee on Water Resources of the International Law Association Dr Olufemi Elias is Legal Adviser with the UN Compensation Commission Geneva and formerly a Lecturer in international law at King s College London

The Community of Interest Approach in International Water Law Julie Gj ørtz Howden,2020-06-02 In The Community of Interest Approach in International Water Law Julie Gj ørtz Howden identifies the normative elements of the community of interest approach COIA in international water law and demonstrates how the approach can provide a legal framework for common management of international watercourses Through analyses of various features of international watercourse cooperation and common management the book determines the main principles and the underlying values of the COIA and discusses how the approach contributes to the development of international water law Although the COIA is one of the central theories of international water law very few analytical accounts of its legal features exist Through The Community of Interest Approach in International Water Law Howden offers a new and fresh approach to international water law that pulls together questions of holistic management State sovereignty public participation and river basin organisations into the analyses of the COIA and its relevance for managing transboundary watercourses today

The Law of Non-navigational Uses of International Watercourses Nahid Islam,2010-01-01 Presentation de l ditteur Despite Asia s large share of global water resources and the importance of its water for sustaining one of the largest agrarian populations in the world Asia s trans boundary water resource management regimes are poorly developed There are only two working international regimes in South and South east Asia the Mekong and the Indus regimes The remaining international watercourses in Asia are used by riparian countries in a self interested manner without much consideration for the interests of other states or for the environment These national interests do not often represent the interests and needs of the local people This book is divided into three Parts Part I discusses the different contexts of law making in the industrialized west and in agrarian societies in Asia as well as the changing context of law making following the emergence of the concept of sustainable development Part II discusses the regime of international watercourses Part III of the book presents two case studies in Asia the Mekong and the Ganges The main argument is that in the absence of public participation in decision making and resource management the basin states revert to using the watercourses according to the principles of the classical regime The result so far has been unsustainable development environmental degradation and growing poverty of local user communities

International Water Law and the Quest for Common Security Bjorn-Oliver Magsig,2015-03-24 The world s freshwater supplies are increasingly threatened by rapidly increasing demand and the impacts of global climate change but current approaches to transboundary water management are unsustainable and may threaten future global stability and international security The absence of law in attempts to address this issue highlights the necessity for further understanding from the legal perspective This book provides a fresh conceptualisation of water security developing an

operational methodology for identifying the four core elements of water security which must be addressed by international law availability access adaptability and ambit The analysis of the legal framework of transboundary freshwater management based on this contemporary understanding of water security reveals the challenges and shortcomings of the current legal regime In order to address these shortcomings the present mindset of prevailing rigidity and state centrism is challenged by examining how international legal instruments could be crafted to advance a more flexible and common approach towards transboundary water interaction The concept of considering water security as a matter of regional common concern is introduced to help international law play a more prominent role in addressing the challenges of global water insecurity Ways for implementing such an approach are proposed and analysed by looking at international hydropolitics in Himalayan Asia The book analyses transboundary water interaction as a case study for advancing public international law in order to fulfil its responsibility of promoting international peace and security
