Search Foundations Sachi Arafat, Elham Ashoori, 2019-02-12 A call to redirect the intellectual focus of information retrieval and science IR the phenomenon of mediation gets at the heart of the human machine relationship Framing IR S more broadly in this way generalizes its problems and perspectives dovetailing them with those shared across disciplines dealing with socio technical phenomena

This reorientation of IR S requires imagining it as a new kind of science a science of technology mediated experience STME Arafat and Ashoori not only offer detailed analysis of the foundational concepts underlying IR S and other technical disciplines but also boldly call for a radical systematic appropriation of the sciences and humanities to create a better understanding of the human technology relationship Arafat and Ashoori discuss the notion of progress in IR S and consider ideas of progress from the history and philosophy of science They argue that progress in IR S requires explicit linking between technical and nontechnical aspects of discourse They develop a network of basic questions and present a discursive framework for addressing these questions With this book Arafat and Ashoori provide both a manifesto for the reimagining of their field and the foundations on which a reframed IR S would rest
