Trends In Ecological Research For The 1980s Nato Conference Series I Ecology:

Trends in Ecological Research for the 1980s June H. Cooley, 2013-03-13 Is ecology at a crossroad After three decades of rapid though somewhat anarchic development many ecologists now are beginning to ask this question They have the feeling of no longer belonging to a unified and mature scientific discipline Many of them claim to be mere empiricists whereas others are proud to be considered theoreticians Each side has its own journals and holds its own specialists meetings tending to disregard the achievements of the other The communication gap between the two schools is quickly widening to the detriment of both To make things worse the word ecology now has a different meaning for the professional biologists and the general public Ecology is still considered as a creditable though rather soft scientific discipline by the former whereas it is perceived as a new non conformist political philosophy by the latter Empirical ecologists are fundamentally naturalists who enjoy the immense complexity of the natural world and devote their lifetimes to the description of the many adaptive characteristics morphological biological or behavioral of the hundreds of thousands of species sharing the earth with us They generally are ignorant of if not allergic to the use of any mathematical representation of living phenomena They feel that ecological theory is rapidly becoming a mathematical game that has lost any contact with the realities of life

Tropical Rainforest Research — Current Issues D.S. Edwards, W.E. Booth, S.C. Choy, 2012-12-06 Proceedings of the conference held in Bandar Seri Begawan April 1993 *Igapó (Black-water flooded forests) of the Amazon Basin* Randall W. Myer, 2018-10-22 Igap forests are a common part of the Amazon whose ecosystems are critical to our shared human future The introduction addresses the structure function and dynamics of igap forests in the Amazon basin focusing on their uniqueness due to their high level of complexity defined as the many ways that different components of igap forests in the Amazon basin ecosystem interact and also on how those interactions are on a higher order compared to other tropical forests The text then breaks down the igap ecosystem using these sections 1 Igap forests over space and time 2 Water light and soils 3 The carbon cycle 4 Litter fungi and invertebrates 5 Vertebrates 6 Plant population studies 7 Plant community studies and 8 Human impacts and management Experts from around the world serve as chapter authors that review what is known about their specific part of the igap ecosystem what research they have done and also what needs to be done in the future

Natural Resources And People Kenneth A. Dahlberg, 2019-03-08 In this book the authors provides an up to date assessment of research on human interactions with natural resource systems They pay attention to the interaction between theory and practice by including case studies and detailed examples involving specific natural resource systems

Insect Biodiversity Robert G. Foottit, Peter H. Adler, 2009-03-03 Insect Biodiversity Science and Society brings together leading scientific experts to assess the impact insects have on humankind and the earth's fragile ecosystems It examines why insect biodiversity matters and how the rapid evolution of insect species is affecting us all Insects and related arthropods make up more than 50 percent of the known animal diversity globally yet a lack of knowledge about insects is

hindering the advance of science and society This book explores the wide variety in type and number of insect species and their evolutionary relationships Case studies offer assessments on how insect biodiversity can help meet the needs of a rapidly expanding human population and also examine the consequences that an increased loss of insect species will have on the world The book concludes that a better understanding of the biology and ecology of insects is the only way to sustainably manage ecosystems in an ever changing global environment

Biodiversity II A Joseph Henry Press book, 1996-09-16 The book before you carries the urgent warning that we are rapidly altering and destroying the environments that have fostered the diversity of life forms for more than a billion years With those words Edward O Wilson opened the landmark volume Biodiversity National Academy Press 1988 Despite this and other such alarms species continue to vanish at a rapid rate taking with them their genetic legacy and potential benefits Many disappear before they can even be identified Biodiversity II is a renewed call for urgency This volume updates readers on how much we already know and how much remains to be identified scientifically It explores new strategies for quantifying understanding and protecting biodiversity including New approaches to the integration of electronic data including a proposal for a U S National Biodiversity Information Center Application of techniques developed in the human genome project to species identification and classification The Gap Analysis Program of the National Biological Survey which uses layered satellite climatic and biological data to assess distribution and better manage biodiversity The significant contribution of museum collections to identifying and categorizing species which is essential for understanding ecological function and for targeting organisms and regions at risk The book describes our growing understanding of how megacenters of diversity e g rainforest insects coral reefs are formed maintained and lost what can be learned from mounting bird extinctions and how conservation efforts for neotropical primates have fared It also explores ecosystem restoration sustainable development and agricultural impact Biodiversity II reinforces the idea that the conservation of our biological resources is within reach as long as we pool resources better coordinate the efforts of existing institutions museums universities and government agencies already dedicated to this goal and enhance support for research collections and training This volume will be important to environmentalists biologists ecologists educators students and concerned individuals
