Understanding Machine Learning From Theory To Algorithms Shai Ben David:

Understanding Machine Learning Shai Shalev-Shwartz, Shai Ben-David, 2014-05-19 Introduces machine learning and its algorithmic paradigms explaining the principles behind automated learning approaches and the considerations underlying their usage

[Machine Learning Fundamentals](#) Hui Jiang, 2021-11-25 This lucid accessible introduction to supervised machine learning presents core concepts in a focused and logical way that is easy for beginners to follow The author assumes basic calculus linear algebra probability and statistics but no prior exposure to machine learning Coverage includes widely used traditional methods such as SVMs boosted trees HMMs and LDAs plus popular deep learning methods such as convolution neural nets attention transformers and GANs Organized in a coherent presentation framework that emphasizes the big picture the text introduces each method clearly and concisely from scratch based on the fundamentals All methods and algorithms are described by a clean and consistent style with a minimum of unnecessary detail Numerous case studies and concrete examples demonstrate how the methods can be applied in a variety of contexts

Introduction to Online Convex Optimization, second edition Elad Hazan, 2022-09-06 New edition of a graduate level textbook on that focuses on online convex optimization a machine learning framework that views optimization as a process In many practical applications the environment is so complex that it is not feasible to lay out a comprehensive theoretical model and use classical algorithmic theory and or mathematical optimization Introduction to Online Convex Optimization presents a robust machine learning approach that contains elements of mathematical optimization game theory and learning theory an optimization method that learns from experience as more aspects of the problem are observed This view of optimization as a process has led to some spectacular successes in modeling and systems that have become part of our daily lives Based on the Theoretical Machine Learning course taught by the author at Princeton University the second edition of this widely used graduate level text features Thoroughly updated material throughout New chapters on boosting adaptive regret and approachability and expanded exposition on optimization Examples of applications including prediction from expert advice portfolio selection matrix completion and recommendation systems SVM training offered throughout Exercises that guide students in completing parts of proofs

[Machine and Deep Learning Algorithms and Applications](#) Uday Shankar Shanthamallu, Andreas Spanias, 2022-05-31 This book introduces basic machine learning concepts and applications for a broad audience that includes students faculty and industry practitioners We begin by describing how machine learning provides capabilities to computers and embedded systems to learn from data A typical machine learning algorithm involves training and generally the performance of a machine learning model improves with more training data Deep learning is a sub area of machine learning that involves extensive use of layers of artificial neural networks typically trained on massive amounts of data Machine and deep learning methods are often used in contemporary data science tasks to address the growing data sets and detect cluster and classify data patterns Although machine learning commercial interest has grown

relatively recently the roots of machine learning go back to decades ago We note that nearly all organizations including industry government defense and health are using machine learning to address a variety of needs and applications The machine learning paradigms presented can be broadly divided into the following three categories supervised learning unsupervised learning and semi supervised learning Supervised learning algorithms focus on learning a mapping function and they are trained with supervision on labeled data Supervised learning is further sub divided into classification and regression algorithms Unsupervised learning typically does not have access to ground truth and often the goal is to learn or uncover the hidden pattern in the data Through semi supervised learning one can effectively utilize a large volume of unlabeled data and a limited amount of labeled data to improve machine learning model performances Deep learning and neural networks are also covered in this book Deep neural networks have attracted a lot of interest during the last ten years due to the availability of graphics processing units GPU computational power big data and new software platforms They have strong capabilities in terms of learning complex mapping functions for different types of data We organize the book as follows The book starts by introducing concepts in supervised unsupervised and semi supervised learning Several algorithms and their inner workings are presented within these three categories We then continue with a brief introduction to artificial neural network algorithms and their properties In addition we cover an array of applications and provide extensive bibliography The book ends with a summary of the key machine learning concepts

Artificial Intelligence and Intellectual Property Jyh-An Lee, Reto Hilty, Kung-Chung Liu, 2021-02-25 Artificial Intelligence AI has become omnipresent in today's business environment from chatbots to healthcare services to various ways of creating useful information While AI has been increasingly used to optimize various creative and innovative processes the integration of AI into products services and other operational procedures raises significant concerns across virtually all areas of intellectual property IP law While AI has drawn extensive attention from IP experts globally this is the first book providing a broad and comprehensive picture from the perspectives of the very nature of AI technology its commercial implications its interaction with different kinds of IP IP administration software and data its social and economic impact on the innovation policy and ultimately AI's eligibility as a legal entity

Case Studies on Blended Learning in Higher Education Santosh Panda, Sanjaya Mishra, Pradeep Kumar Misra, 2024-12-29 This book presents a collection of curated case studies written by esteemed international experts focusing on planning management and evaluation of designing developing and delivering high quality blended programmes and courses Embracing a holistic perspective of online and blended learning and based on the mapping of diverse national and institutional education systems it offers an insightful exploration of innovative and best practices through case studies on policy planning and management and quality assurance for blended learning in higher education Each chapter presents a theoretical background contextual analysis and a reflective practitioner approach The topics covered include national and international policies and guidelines for blended learning in higher education issues related to planning and management

learner satisfaction and engagement costing of blended learning and return on investment quality assurance and program evaluation The book explores blended learning as a scholarly practice for continuous learning and improvement and for generating new knowledge and insights Each chapter concludes with reflective questions to help the reader apply the lessons learned This book interests a diverse audience including policymakers accreditation agencies managers of teaching and learning centers in higher education institutions teachers in HEIs and those involved in blended learning research Its comprehensive coverage and practical insights make it an essential resource for those seeking to navigate the complexities of implementing effective blended learning initiatives

Machine Learning Approaches in Cyber Security Analytics Tony Thomas, Athira P. Vijayaraghavan, Sabu Emmanuel, 2019-12-16 This book introduces various machine learning methods for cyber security analytics With an overwhelming amount of data being generated and transferred over various networks monitoring everything that is exchanged and identifying potential cyber threats and attacks poses a serious challenge for cyber experts Further as cyber attacks become more frequent and sophisticated there is a requirement for machines to predict detect and identify them more rapidly Machine learning offers various tools and techniques to automate and quickly predict detect and identify cyber attacks

The Mathematics of Machine Learning Maria Han Veiga, François Gaston Ged, 2024-05-20 This book is an introduction to machine learning with a strong focus on the mathematics behind the standard algorithms and techniques in the field aimed at senior undergraduates and early graduate students of Mathematics There is a focus on well known supervised machine learning algorithms detailing the existing theory to provide some theoretical guarantees featuring intuitive proofs and exposition of the material in a concise and precise manner A broad set of topics is covered giving an overview of the field A summary of the topics covered is statistical learning theory approximation theory linear models kernel methods Gaussian processes deep neural networks ensemble methods and unsupervised learning techniques such as clustering and dimensionality reduction This book is suited for students who are interested in entering the field by preparing them to master the standard tools in Machine Learning The reader will be equipped to understand the main theoretical questions of the current research and to engage with the field

AI Development and the 'Fuzzy Logic' of Chinese Cyber Security and Data Laws Max Parasol, 2021-12-16 The book examines the extent to which Chinese cyber and network security laws and policies act as a constraint on the emergence of Chinese entrepreneurialism and innovation Specifically how the contradictions and tensions between data localisation laws as part of Network Sovereignty policies affect innovation in artificial intelligence AI The book surveys the globalised R D networks and how the increasing use of open source platforms by leading Chinese AI firms during 2017 2020 exacerbated the apparent contradiction between Network Sovereignty and Chinese innovation The drafting of the Cyber Security Law did not anticipate the changing nature of globalised AI innovation It is argued that the deliberate deployment of what the book refers to as fuzzy logic in drafting the Cyber Security Law allowed regulators to subsequently interpret key terms regarding data in that Law in a fluid and flexible
