Unit Operations in Environmental Engineering Robert Noyes, 1994-12-31 This book discusses the practical aspects of environmental technology organized into eight chapters relating to unit operations as follows 1 Biological Technology 2 Chemical Technology 3 Containment and Barrier Technology 4 Immobilization Technology 5 Membrane Technology 6 Physical Technology 7 Radiation and Electrical Technology 8 Thermal Destruction Technology Traditional technologies have been included as well as those that can be considered innovative and emerging The traditional approaches have been the most successful as contractors are careful about bidding on some of the newer technologies However as regulatory requirements increase markets will open for the innovative and emerging processes There will be increasing pressure to break down complex waste streams with each subsequent stream demanding separate treatment In addition a number of technologies have been developed by combining processes directly or in a treatment train and these developments are expected to assume increasing importance However such concerns as uncertainties due to liability regulatory approval price competition and client approval have limited the application of some of these newer technologies

Engineering Education, 1981 Water Purification and Management José Coca-Prados, Gemma Gutiérrez-Cervelló, 2010-12-14 One of the major challenges for many Mediterranean and other countries is finding viable solutions to tackle water shortage Some of the major water quality constraints derive from the high salinity of groundwater and from pollution sources such as untreated domestic sewage fertilizers and pesticides from irrigation drainage industrial effluents and solid waste disposal Wastewater treatment processes involving physico chemical and biological treatment chemical oxidation membrane technologies along with methods of solids concentration and disposal are of special relevance in dealing with these problems This volume contains selected lectures presented at the NATO ADVANCED TRAINING COURSE held in Oviedo November 15 21 2009 and sponsored by the NATO Science for Peace and Security SPS Programme They cover a variety of topics from wastewater treatment methods to cleaner production strategies as a careful management of water resources is the basis for sustainable development and to avoid potential security threats The reader will benefit from a general view of some of the operations involved in wastewater treatment and solid concentration and disposal methods A proper water reuse and recycling together with efficient solid disposal would contribute to a better use of the resources and a sustainable economic growth particularly in many arid lands of the world
