Renewable Energy Nick Jelley, 2025-10-31 Very Short Introductions Brilliant Sharp Inspiring Energy is vital for a good standard of living and affordable sources of power that do not cause climate change or pollution are crucial Renewable energy is recognised as providing the answer with countries from around the world deciding at COP28 in 2023 to aim to triple the global renewable energy capacity by 2030 for the transition away from fossil fuels to be on track for net zero emissions by 2050 This Very Short Introduction describes the main sources of renewable energy solar PV wind hydropower and biomass their innovative technologies and what each could deliver It also discusses the relatively small contributions expected from tidal wave geothermal and nuclear power and from carbon capture and storage Nick Jelley presents how the variability of solar PV and wind power can be handled in an electricity grid predominantly powered by renewables and discusses recent innovations in batteries and other energy storage technologies Jelley goes on to explain the importance of decarbonising the huge global heat demand by using heat pumps hydrogen from electrolyzers and electricity directly and of changing to electric vehicles which will decarbonise most of transport Electrification of buildings industry and transport for net zero will roughly triple the supply of electricity and this can be met predominantly by solar PV and wind power The learning effect has resulted in a dramatic drop in the price of wind and solar PV power in the last decade making them the cheapest generators of electricity in most parts of the world This could make powering the world by renewables considerably cheaper than continuing to burn fossil fuels Jelley explores the challenges in achieving this notably geopolitical tensions lack of grid infrastructure permitting planning issues the availability of finance in the global South and the vested interests in fossil fuels The Very Short Introduction ends by discussing the actions needed that include strong consistent policies financial initiatives to take advantage of the long term benefits of renewables and good community involvement

ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

Frosting for Air Source Heat Pumps Mengjie Song, Long Zhang, 2024-10-24 Frosting for Air Source Heat Pumps Research Case Studies and Methods provides a comprehensive accounting of the latest research analysis and modeling methods for limiting frosting and maximizing efficiency The book begins by outlining the fundamentals of frosting mechanisms including the condensation and freezing of water droplets It then provides a wide range of case studies that showcase a variety of surfaces conditions and energy generation technologies Finally the last chapters demonstrate modeling and analysis of frosting operation before laying out critical considerations for designing a frost control strategy in ASHPs Building on the theory and studies contained in the author's previous work Defrosting for Air Source Heat Pumps this book provides essential and advanced information for understanding and controlling frosting for these sustainable energy sources Outlines the fundamentals of frosting mechanisms in different circumstances and on a variety of surfaces Provides a wide range of real world case studies including demonstrations of analysis and modeling in finned tube heat exchangers and ASHPs Details a huge collection of experimental and numerical data on reverse cycle defrosting the most common defrosting methods for ASHPs

Heat Pumps for Energy Efficiency and Environmental Progress J. Bosma, 2012-12-02 The 70 papers collected in this volume present an up to date review of the trends in heat pump technology The heat pump is reviewed both as being part of a more comprehensive system and as a refined device providing energy and greenhouse gas emission reductions Its implementation in a system or process must be carefully considered at an early stage of design or development and process integration is discussed in detail as a valuable tool for industry The heat pump is proving to be a highly effective energy conserving tool particularly when designed and used as an integral part of a system Environmental benefits are gained when energy is conserved and heat pumps can make a major contribution in this area However some heat pumps use working fluids which are environmentally unfriendly and the progress that has been made in the field of alternative refrigerants is reported on The volume will prove an indispensable reference source on the wide ranging applications that have been developed since the last international conference on such topics as heat pump field trials pilot plants and development programmes
