Words Thoughts And Theories Learning Development And Conceptual Change:

Words, Thoughts, and Theories Alison Gopnik, Andrew N. Meltzoff, 1998-09-01 Words Thoughts and Theories articulates and defends the theory theory of cognitive and semantic development the idea that infants and young children like scientists learn about the world by forming and revising theories a view of the origins of knowledge and meaning that has broad implications for cognitive science Gopnik and Meltzoff interweave philosophical arguments and empirical data from their own and other s research Both the philosophy and the psychology the arguments and the data address the same fundamental epistemological question How do we come to understand the world around us Recently the theory theory has led to much interesting research However this is the first book to look at the theory in extensive detail and to systematically contrast it with other theories It is also the first to apply the theory to infancy and early childhood to use the theory to provide a framework for understanding semantic development and to demonstrate that language acquisition influences theory change in children The authors show that children just beginning to talk are engaged in profound restructurings of several domains of knowledge These restructurings are similar to theory changes in science and they influence children s early semantic development since children s cognitive concerns shape and motivate their use of very early words But in addition children pay attention to the language they hear around them and this too reshapes their cognition and causes them to reorganize their theories

Meta-cognition Michael F. Shaughnessy, Marcel Veenman, Cynthia Kleyn Kennedy, 2008 Over the past two decades the word metacognition has become a regularly used part of our language and vocabulary in both psychology and education Many research articles have been written about it the conceptualisation of this construct has expanded and conferences abound with investigations and empirical research into various facets of this domain This book provides some of the most recent research by scholars from various parts of the world It includes differing perspectives some empirical some theory driven and some application papers The book focuses on metacognition and it s relevance to gifted and highly able students Many of the papers focus directly and specifically on this others are more tangential in nature

Museum Learning Jill Hohenstein, Theano Moussouri, 2017-10-16 As museums are increasingly asked to demonstrate not only their cultural but also their educational and social significance the means to understand how museum visitors learn becomes ever more important And yet learning can be conceptualised and investigated in many ways Coming to terms with how theories about learning interact with one another and how they relate to evidence based learning can be confusing at best Museum Learning attempts to make sense of multiple learning theories whilst focusing on a set of core learning topics in museums Importantly learning is considered not just as a cognitive characteristic as some perspectives propose but also as affective taking into consideration interests attitudes and emotions and as a social practice situated in cultural contexts This book draws attention to the development of theory and its practical applications in museum situations such as aquariums zoos botanical gardens and historical re enactment sites among others This volume will be of interest to museum studies students

practitioners and researchers working in informal learning contexts and will help them to reflect on what it means to learn in museums and create more effective environments for learning
