Working Memory and Ageing Robert H. Logie, Robin G. Morris, 2014-06-20 The rapid growth in the numbers of older people worldwide has led to an equally rapid growth in research on the changes across age in cognitive function including the processes of moment to moment cognition known as working memory This book brings together international research leaders who address major questions about how age affects working memory Why is working memory function much better preserved in some people than others In all healthy adults which aspects of working memory are retained in later years and which aspects start declining in early adulthood Can cognitive training help slow cognitive decline with age How are changes in brain structures connectivity and activation patterns related to important changes in working memory function Impairments of cognition and particularly of working memory can be major barriers to independent living The chapters of this book dispel some popular myths about cognitive ageing while presenting the state of the science on how and why working memory functions as it does throughout the adult lifespan Working Memory and Aging is the first volume to provide an overview of the burgeoning literature on changes in working memory function across healthy and pathological ageing and it will be of great interest to advanced undergraduates postgraduates and researchers in psychology and related subject areas concerned with the effects of human ageing including several areas of medicine Working Memory and Thinking Kenneth Gilhooly, 2004-08-02 With contributions from international researchers on working memory and thinking this volume aims to break down the scientific divisions and foster scientific integration in the connections between these two core functions of cognition **Memory and Aging** Moshe Naveh-Benjamin, Nobuo Ohta, 2012-05-04 Current demographical patterns predict an aging worldwide population It is projected that by 2050 more than 20% of the US population and 40% of the Japanese population will be older than 65 A dramatic increase in research on memory and aging has emerged to understand the age related changes in memory since the ability to learn new information and retrieve previously learned information is essential for successful aging and allows older adults to adapt to changes in their environment self concept and social roles This volume represents the latest psychological research on different aspects of age related changes in memory Written by a group of leading international researchers its chapters cover a broad array of issues concerning the changes that occur in memory as people grow older including the mechanisms and processes underlying these age related memory changes how these changes interact with social and cultural environments and potential programs intended to increase memory performance in old age Similarly the chapters draw upon diverse methodological approaches including cross cultural extreme group experimental designs longitudinal designs assessing intra participant change and computational approaches and neuroimaging assessment Together they provide converging evidence for stability and change in memory as people grow older for the underlying causes of these patterns as well as for the heterogeneity in older adults performance Memory and Aging is essential reading for researchers in memory cognitive aging and gerontology **The Oxford**
