Chen, 2006 This important book includes research derived from non invasive brain imaging modalities used to explore the spatial and temporal organisation of the neural systems supporting human behaviour Imaging modalities of interest include positron emission tomography event related potentials electro and magnetoencephalography magnetic resonance imaging and single photon emission tomography Coverage includes novel brain imaging methods analyses for detecting or localising neural activity synergistic uses of multiple imaging modalities and strategies for the design of behavioural paradigms and neural systems modelling **Brain Mapping Research**

Developments Lars N. Bakker, 2008 Brain mapping is a set of neuroscience techniques predicated on the mapping of biological quantities or properties onto spatial representations of the human or non human brain resulting in maps All neuroimaging can be considered part of brain mapping Brain mapping can be conceived as a higher form of neuroimaging producing brain images supplemented by the result of additional imaging or non imaging data processing or analysis such as maps projecting measures of behaviour onto brain regions see fMRI Brain mapping techniques are constantly evolving and rely on the development and refinement of image acquisition representation analysis visualisation and interpretation techniques Functional and structural neuroimaging are at the core of the mapping aspect of brain mapping This book presents the latest research in the field **Neuroscience Imaging Research Trends** Bernhard Schaller, 2008 This book

focuses on advances in imaging and mapping strategies to study the brain s structure function and the relationship between both from the whole brain to the molecular and cellular tissue level in order to improve the understanding of normal and disease processes Studies of intact living organisms may be at the human animal cellular or molecular level which advance our understanding of biological events in living systems and how these events relate to normal and pathological processes Imaging modalities include nuclear medicine techniques SPECT and PET and non nuclear techniques such as MRI MRS CT ultrasound intravital microscopy optical imaging diffuse optical tomography electromagnetic tomography and other methods which elucidate molecular and cellular mechanisms accelerate the understanding of biology test the efficacy of therapeutic interventions in intact living systems and assess the therapeutic outcomes **Trends in Brain Research** F.
