Flammer, W. Kinzelbach, 2000-04-01 Research on discourse or text processing has only recently come into its own It builds on the work of text analysis which has a long and distinguished history but modern developments in psychology e g memory research artificial intelligence linguistics and philosophy have contributed to this emergence in the last decade as a lively and promising research area This book contains 46 selected and edited contributions from the International Symposium held in Fribourg in 1981 and represents a truly international overview of the developments in research on written and oral discourse The contributions have been grouped according to problem area and not according to methodology with the intention of focusing on the important issues in the field of discourse processing and of showing how diverse approaches contribute to a better understanding of the problems involved The main themes are text structure coherence inference memory processes attention and control goal perspectives and educational implications [Understanding Extreme Sports: A Psychological Perspective](#) Eric Brymer, Francesco Feletti, Erik Monasterio, Robert D. Schweitzer, 2020-03-30 Extreme sports those activities that lie on the outermost edges of independent adventurous leisure activities where a mismanaged mistake or accident would most likely result in death have developed into a significant worldwide phenomenon Brymer Patterson 2002 and Generation Z turn to extreme sports because they are popular and linked to escapism Giannoulakis Pursglove 2017 Arguably extreme sports now support a multi billion dollar industry and the momentum seems to be intensifying Traditional explanations for why extreme sports have become so popular are varied For some the popularity is explained as the desire to rebel against a society that is becoming too risk averse for others it is about the spectacle and the merchandise that is associated with organised activities and athletes For others it is just that there are a lot of people attracted by risk and danger or just want to show off For others still it is about the desire to belong to sub cultures and the glamour that goes with extreme sports Some seek mastery in their chosen activity and in situations of significant challenges This confusion is unfortunate as despite their popularity there is still a negative perception about extreme sports participation There is a pressing need for clarity The dominant research perspective has focused on positivist theory driven perspectives that attempt to match extreme sports against predetermined characteristics For the most part empirical research has conformed to predetermined societal perspectives Other ways of

knowing might reveal more nuanced perspectives of the human dimension of extreme sport participation This special edition brings together cutting edge research and thought examining psychology and extreme sports with particular attention paid to the examination of motivations for initial participation continued participation effective performance and outcomes from participation
