Evertson, Carol S. Weinstein, 2013-10-31 Classroom management is a topic of enduring concern for teachers administrators and the public It consistently ranks as the first or second most serious educational problem in the eyes of the general public and beginning teachers consistently rank it as their most pressing concern during their early teaching years Management problems

continue to be a major cause of teacher burnout and job dissatisfaction. Strangely despite this enduring concern on the part of educators and the public few researchers have chosen to focus on classroom management or to identify themselves with this critical field. The Handbook of Classroom Management has four primary goals: 1 to clarify the term classroom management; 2 to demonstrate to scholars and practitioners that there is a distinct body of knowledge that directly addresses teachers' managerial tasks; 3 to bring together disparate lines of research and encourage conversations across different areas of inquiry; and 4 to promote a vigorous agenda for future research in this area. To this end 47 chapters have been organized into 10 sections, each chapter written by a recognized expert in that area. Cutting across the sections and chapters are the following themes: First, positive teacher-student relationships are seen as the very core of effective classroom management. Second, classroom management is viewed as a social and moral curriculum. Third, external reward and punishment strategies are not seen as optimal for promoting academic and social-emotional growth and self-regulated behavior. Fourth, to create orderly, productive environments, teachers must take into account student characteristics such as age, developmental level, race, ethnicity, cultural background, socioeconomic status, and ability. Like other research handbooks, the Handbook of Classroom Management provides an indispensable reference volume for scholars, teacher-educators, in-service practitioners, and the academic libraries serving these audiences. It is also appropriate for graduate courses wholly or partly devoted to the study of classroom management.

Insights into the Effectiveness of Exercise/Lifestyle Recommendations in Primary Care
Tatsunori Ikemoto, Carol Ewing Garber, Patricia C. Heyn, 2023-10-23

The World Health Organization (WHO) reported that physical activity is one of the leading risk factors for non-communicable disease deaths worldwide. Several studies have shown that physical activity can reduce the risk of conditions such as heart disease, stroke, and diabetes. Furthermore, exercise has been found to be beneficial in certain mental health conditions and improving the quality of life in patients undergoing cancer treatment. However, WHO estimates that 1 in 4 adults worldwide are not physically active enough. This has led to the development of the WHO global action plan on increasing physical activity, which includes integrating physical activity into primary health care. Globally, primary care professionals are already prescribing lifestyle changes, including those aimed at increasing physical activity. Examples of this include prescription of gym memberships and initiatives that aim to better educate physicians on the benefits of physical activity on patient health. This research topic aims to discuss the effectiveness of exercise/lifestyle recommendations in improving patient outcomes in primary care.

Assessing physical activity in primary care practice
The use of exercise prescription to manage neurological diseases
The uptake of patients completing a recommended exercise plan and what can be done to increase this
The importance of communication between the patient and physician in implementing the exercise plan and how this could be improved
Confounding factors that affect the patient in following an exercise plan/lifestyle recommendation
Examples of where exercise recommendations by primary health care professionals have been successfully implemented in a real-world setting
Examples of successful clinical and community

collaborations with allied health professionals such as exercise physiologists
