1. C2 (iii)
2. C3
3. C6 (i)

1. C2 (iii) Exercise:

The data set in *CEOSAL2.RAW* contains information on chief executive officers for U.S. corporations. The variable *salary* is annual compensation, in thousands of dollars, and *ceoten* is prior number of years as company CEO.

(iii) Estimate the simple regression model

$$\log(\text{salary}) = b_0 + b_1 \text{ceoten} + u,$$

and report your results in the usual form. What is the (approximate) predicted percentage increase in salary given one more year as a CEO?

Introductory Manual of Electrophysiology George Camougis, 2012-12-06 For centuries man knew about the lightning of the sky atmospheric or physical electricity and the numbing effects from contact with powerful electric fishes animal electricity Then after proper experimentation and a synthetic ration ale it began to appear that physical and animal electricity were related in fundamental respects This realization was made at the end of the eighteenth century since when the pages of history have been replete with exciting discoveries and developments in electricity and magnetism electrochemistry and electrophysiology It is hoped that this manual will enable some students to relive some of that excitement The author remembers vividly the excitement when as an undergraduate he saw his first action potential This book is not intended for any particular group of students it should prove to be of some value to students in secondary schools colleges and graduate schools Based on personal experience the author feels that many teachers will also find it of use Nor is the manual intended solely as a laboratory manual for an introductory course in neurophysiology Some of the experiments might be introduced into the formal laboratory schedule of general or animal physiology courses Alternatively the various experiments might provide the bases for the beginning of special projects lasting for a full semester or even longer

ZUM '98: The Z Formal Specification Notation Jonathan P. Bowen, Andreas Fett, Michael G. Hinchey, 2011-04-06 1 In a number of recent presentations most notably at FME 96 one of the foremost scientists in the field of formal methods C A R Hoare has highlighted the fact that formal methods are not the only technique for producing reliable software This seems to have caused some controversy not least amongst formal methods practitioners How can one of the founding fathers of formal methods seemingly denounce the field of research after over a quarter of a century of support This is a question that has been posed recently by some formal methods skeptics However Prof Hoare has not abandoned formal methods He is reiterating 2 albeit more radically his 1987 view that more than one tool and notation will be required in the practical industrial development of large scale complex computer systems and not all of these tools and notations will be or even need be formal in nature Formal methods are not a solution but rather one of a selection of techniques that have proven to be useful in the development of reliable complex systems and to result in hardware and software systems that can be produced on time and within a budget while satisfying the stated requirements After almost three decades the time has come to view formal methods in the context of overall industrial scale system development and their relationship to other techniques and methods We should no longer consider the issue of whether we are pro formal or anti formal but rather the degree of formality if any that we need to support in system development This is a goal of ZUM 98 the 11th International Conference of Z Users held for the first time within continental Europe in the city of Berlin Germany
