Modeling and Transformation of Workflows with Temporal Constraints Wolfgang Gruber, 2004 Workflow management systems support the execution of business processes They require the modeling of the processes they drive the actual enactment of process instances and they document the business process execution Many different modeling languages and systems have been developed for design and representation of business processes and workflows as a consequence of different requirements different purposes and also different schools and modeling philosophies The differences are partly on a conceptual level in the sense that the modeling languages offer different concepts and constructs and partly on the representation level where basically the same constructs are represented differently e g text or graph based This book makes two important contributions to workflow modeling First it provides a meta model based on abstract modeling concepts allowing to overcome representation differences of workflow descriptions and secondly it introduces a set of equivalence transformations on workflow models Such transformations are an important tool for workflow developments as they allow representing workflows differently for different purposes These transformations are used in algorithms for checking the ability of temporal constraints in workflow

definitions and using this apparatus made it possible to develop a great sophisticated time management system for workflows which not only checks temporal constraints but can also be used to develop time plans for workflow execution **Data**

Warehousing and Mining John Wang, 2008 This collection offers tools designs and outcomes of the utilization of data mining and warehousing technologies such as algorithms concept lattices multidimensional data and online analytical processing With more than 300 chapters contributed by over 575 experts from around the globe this authoritative collection will provide libraries with the essential reference on data mining and warehousing Provided by publisher **Methods and Associated Tools for the Information Systems Life Cycle** A. A. Verrijn Stuart, T. William Olle, 1994 In the early days of methods the distinction between the process and the product was unclear Sometimes consideration was concentrated on the problems of what models should be formulated at other times on how such results were to be achieved The methods and tools as the two factors became known enjoyed increasing attention over the years though emphasis now as then is almost always placed on the outcome rather than on the ways towards it This publication explores methods and associated tools in the perspective of the information systems life cycle It discusses the need for method flexibility within a design base of certain strict standards and with respect given to the potential harmonization of existing methods The contribution of a broad range of specialists ensures that papers extend across the various facets of the discipline Conceptual Modeling--ER ..., 2004 INFOR., 2005 *Intelligent Agents and Multi-agent Systems*, 2004 Business Process Management, 2005
