Working Longer The Solution To The Retirement Income Challenge:

Working Longer Alicia H. Munnell, Steven A. Sass, 2009-10-01 Daily headlines warn American workers that their retirement years may be far from golden. The main components of the retirement income system, Social Security and employer-provided pensions and health insurance, are in decline while the amount of income needed for a comfortable retirement continues to rise. In *Working Longer*, Alicia Munnell and Steven Sass suggest a simple solution to this problem: postponing retirement by two to four years. By following their advice, the average worker retiring in 2030 can be as well off as today's retirees. Implementing this solution on a national scale, however, may not be simple. *Working Longer* investigates the prospects for moving the average retirement age from 63 (the current figure) to 66. Munnell and Sass ask whether future generations will be healthy enough to work beyond the current retirement age and whether older men and women want to work. They examine companies' incentives to employ older workers and ask what government can do to promote continued participation in the workforce. Finally, they consider the challenge of ensuring a secure retirement for low-wage workers and those who are unable to continue to work. The retirement system faces very real challenges. But together, workers, employers, and the government can keep this vital piece of the American dream alive.

Grand Challenges of Our Aging Society National Research Council, Division of Behavioral and Social Sciences and Education, Center for Economic, Governance, and International Studies, 2010-04-04 Aging populations are generating both challenges and opportunities for societies around the globe. Increases in longevity and improvements in health raise many questions. What steps can be taken to optimize physical and cognitive health and productivity across the life span? What global interconnections will affect how

each society handles the aging of its population To address these questions the National Academies organized a symposium summarized in the present volume to determine how best to contribute to an evidence based dialogue on population aging that will shape policies and programs Presentations in the fields of biology public health medicine informatics macroeconomics finance urban planning and engineering approached the challenges of aging from many different angles The presenters reviewed the current state of knowledge in their respective fields identifying areas of consensus and controversy and delineating the priority questions for further research and policy development Age in America Corinne T.
