Transition Metals In Supramolecular Chemistry Nato Science Series C:

Transition Metals in Supramolecular Chemistry L. Fabbrizzi, Antonio Poggi, 2013-03-09 Since the pioneering publications on coordination chemistry by Lehn and Pedersen in the late 1960s coupled with the more orthodox interest from the transition metal chemists on template reactions Busch 1964 the field of supramolecular chemistry has grown at an astonishing rate The use of transition metals as essential constituents of multi component assemblies has been especially sharp in recent years since the metals are prone to quick and reversible redox changes and there is a wide variety of metal ligand interactions Such properties make supramolecular complexes of transition metal ions suitable candidates for exploration as light energy converters and signal processors **Transition Metals in Supramolecular Chemistry** focuses on the following main topics 1 metal controlled organization of novel molecular assemblies and shapes 2 design of molecular switches and devices operating through metal centres 3 supramolecular catalysts that mimic metalloenzymes 4 metal containing sensory reagents and supramolecular recognition and 5 molecular materials that display powerful electronic optoelectronic and magnetic properties

Calixarenes 50th Anniversary: Commemorative Issue Jacques Vicens, M.-Z. Asfari, J. Harrowfield, 2012-12-06 We are proud to celebrate the 50th anniversary of the calixarenes In 1944 Zinke and Ziegler proposed a cyclotetrameric structure for an oligomer extracted from the condensation product mixture obtained by reacting p tert butyl phenol with formaldehyde in the presence of sodium hydroxide Fifty years on calixarenes are the basis of many different areas of chemical research with development occurring at an increasing pace over the past decade in particular The present volume does not provide an overview of all these developments but is rather a celebration of some of the highlights This presentation of the intricate mosaic of diversity that characterizes calixarene chemistry will stimulate further developments in this fascinating field

Expanded, Contracted & Isomeric Porphyrins Jonathan L. Sessler, Steven J. Weghorn, 1997 Paperback The porphyrins are a class of naturally occurring macrocycles and are ubiquitous in our world As such they have been called the Pigments of Life This auspicious designation reflects their importance in numerous biological functions Indeed life as we understand it relies on the full range of biological processes that are either performed by or catalyzed by porphyrin containing proteins Chlorophyll containing photosynthetic reaction centers in plants for instance convert light energy into chemical energy while producing oxygen along the way It is this oxygen evolved from photosynthesis that is transported stored and reduced by heme containing proteins in many organisms including mammals Not surprisingly therefore these molecules remain of fundamental interest to chemists and biochemists Indeed they continue to be intensely investigated by researchers world wide Inspired by the importance of the porphyrins a new research di
