Global Environmental

Governance and the Accountability Trap Susan Park, Teresa Kramarz, 2019-02-19 An examination of whether accountability mechanisms in global environmental governance that focus on monitoring and enforcement necessarily lead to better governance and better environmental outcomes The rapid development of global environmental governance has been accompanied by questions of accountability Efforts to address what has been called a culture of unaccountability include greater transparency public justification for governance decisions and the establishment of monitoring and enforcement procedures And yet as this volume shows these can lead to an accountability trap a focus on accountability measures rather than improved environmental outcomes Through analyses and case studies the contributors consider how accountability is being used within global environmental governance and if the proliferation of accountability tools enables governance to better address global environmental deterioration Examining public private voluntary and hybrid types of global environmental governance the volume shows that the different governance goals of the various actors shape the accompanying accountability processes These goals from serving constituents to reaping economic benefits determine to whom and for what the actors must account After laying out a theoretical framework for its analyses the book addresses governance in the key areas of climate change biodiversity fisheries and trade and global value chains The contributors find that normative biases shape accountability processes and they explore the potential of feedback mechanisms between institutions and accountability rules for enabling better governance and better environmental outcomes Contributors Graeme Auld Harro van Asselt Cristina Balboa Lieke Brouwer Lorraine Elliott Lars H Gulbrandsen Aarti Gupta Teresa Kramarz Susan Park Philipp Pattberg William H Schaedla Hamish van der Ven Oscar Widerberg **American Book Publishing Record**, 2006 *Global Environmental Governance Reconsidered* Frank Biermann, Philipp Pattberg, 2012-07-06 An examination of three major trends in global governance exemplified by developments in transnational environmental rule setting The notion of global governance is widely studied in academia and increasingly relevant to politics and policy making Yet many of its fundamental elements remain unclear in both theory and practice This book offers a fresh perspective by analyzing global governance in terms of three major trends as exemplified by developments in global sustainability governance the emergence of nonstate actors new mechanisms of transnational cooperation and increasingly segmented and overlapping layers of authority The book which is the synthesis of a ten year Global Governance Project carried out by thirteen leading European research institutions first examines new nonstate actors focusing on international bureaucracies global corporations and transnational networks of scientists then investigates novel mechanisms of global governance particularly transnational environmental regimes public private partnerships and market based arrangements and finally looks at fragmentation of authority both vertically among supranational international national and subnational layers and horizontally among different parallel rule making systems The implications potential and realities of global environmental governance are defining questions for our generation This book distills key insights from the past and outlines the most important research challenges
