Phenomenology originated as a novel way of doing philosophy early in the twentieth century In the writings of Husserl and Heidegger regarded as its founders it was a non empirical kind of philosophical enquiry Although this tradition has continued in a variety of forms phenomenology is now also used to denote an empirical form of qualitative research PQR especially in health psychology and education However the methods adopted by researchers in these disciplines have never been subject to detailed critical analysis nor have the methods advocated by methodological writers who are regularly cited in the research literature This book examines these methods closely offering a detailed analysis of worked through examples in three influential textbooks by Giorgi van Manen and Smith Flowers and Larkin Paley argues that the methods described in these texts are radically under specified and suggests alternatives to PQR as an approach to qualitative research particularly the use of interview data in the construction of models designed to explain phenomena rather than merely describe or interpret them This book also analyses and aims to develop the implicit theory of meaning found in PQR writings The author establishes an account of meaning as an inference marker and explores the methodological implications of this view This book evaluates the methods used in phenomenology as qualitative research and formulates a more fully theorised alternative It will appeal to researchers and students in the areas of health nursing psychology education public health sociology anthropology political science philosophy and logic **The Learning and Development Handbook** Michelle
