Algebraic Cycles and Motives: Volume 1 Jan Nagel,Chris Peters,2007-05-03 This 2007 book is a self contained account of the subject of algebraic cycles and motives An Introduction to Intersection Homology Theory, Second Edition Frances Kirwan,Jonathan Woolf,2006-06-07 Now more that a quarter of a century old intersection homology theory has proven to be a powerful tool in the study of the topology of singular spaces with deep links to many other areas of mathematics including combinatorics differential equations group representations and number theory Like its predecessor An Introduction to Intersection Homology Theory Second Edition introduces the power and beauty of intersection homology explaining the main ideas and omitting or merely sketching the difficult proofs It treats both the basics of the subject and a wide range of applications providing lucid overviews of highly technical areas that make the subject accessible and prepare readers for more advanced work in the area This second edition contains entirely new chapters introducing the theory of Witt spaces perverse sheaves and the combinatorial intersection cohomology of fans Intersection homology is a large and growing subject that touches on many aspects of topology geometry and algebra With its clear explanations of the main ideas this book builds the confidence needed to tackle more specialist technical texts and provides a framework within which to place them *Calabi-Yau Varieties: Arithmetic, Geometry and Physics* Radu Laza,Matthias Schütt,Noriko Yui,2015-08-27 This volume presents a lively introduction to the rapidly developing and vast research areas surrounding Calabi Yau varieties and string theory With its coverage of the various perspectives of a wide area of topics such as Hodge theory Gross Siebert program moduli problems toric approach and arithmetic aspects the book gives a comprehensive overview of the current streams of mathematical research in the area The contributions in this book are based on lectures that took place during workshops with the following thematic titles Modular Forms Around String Theory Enumerative Geometry and Calabi Yau Varieties Physics Around Mirror Symmetry Hodge Theory in String Theory The book is ideal for graduate students and researchers learning about Calabi Yau varieties as well as physics students and string theorists who wish to learn the mathematics behind these varieties Annals of Mathematics Studies Kazuya Kato,1940 Symposium in Honor of C. H. Clemens Aaron Bertram,James A. Carlson,Holger Kley,2002 Gathers the 14 papers presented during a March 2000 symposium on algebraic geometry The contributors survey the links between geometry and the theory of Korteweg de Vries KdV equations as well as new developments in orbifold string theory Other papers investigate orthogonal complex hyperbolic arrangements vector bundles on the cubic threefold using symmetry to count rational curves the Nash conjecture for non projective threefolds and the punctual Hilbert scheme of a symplectic fourfold No index Annotation copyrighted by Book News Inc Portland OR **Nonabelian Jacobian of Projective Surfaces** Igor Reider,2013-03-02 The Jacobian of a smooth projective curve is undoubtedly one of the most remarkable and beautiful objects in algebraic geometry This work is an attempt to develop an analogous theory for smooth projective surfaces a theory of the nonabelian Jacobian of smooth

projective surfaces Just like its classical counterpart our nonabelian Jacobian relates to vector bundles of rank 2 on a surface as well as its Hilbert scheme of points But it also comes equipped with the variation of Hodge like structures which produces a sheaf of reductive Lie algebras naturally attached to our Jacobian This constitutes a nonabelian analogue of the abelian Lie algebra structure of the classical Jacobian This feature naturally relates geometry of surfaces with the representation theory of reductive Lie algebras groups This work s main focus is on providing an in depth study of various aspects of this relation It presents a substantial body of evidence that the sheaf of Lie algebras on the nonabelian Jacobian is an efficient tool for using the representation theory to systematically address various algebro geometric problems It also shows how to construct new invariants of representation theoretic origin on smooth projective surfaces **The Asian Journal of Mathematics** ,2004

Moll,1999-08-13 The subject of elliptic curves is one of the jewels of nineteenth century mathematics originated by Abel Gauss Jacobi and Legendre This 1997 book presents an introductory account of the subject in the style of the original discoverers with references to and comments about more recent and modern developments It combines three of the fundamental themes of mathematics complex function theory geometry and arithmetic After an informal preparatory chapter the book follows an historical path beginning with the work of Abel and Gauss on elliptic integrals and elliptic functions This is followed by chapters on theta functions modular groups and modular functions the quintic the imaginary quadratic field and on elliptic curves Requiring only a first acquaintance with complex function theory this book is an ideal introduction to the subject for graduate students and researchers in mathematics and physics with many exercises with hints scattered throughout the text *Topics in Transcendental*

Algebraic Geometry Phillip Griffiths,1984-06-21 During 1981 1982 the Institute for Advanced Study held a special year on algebraic geometry Naturally there were a number of seminars and this volume is essentially the proceedings of one of these The motif of the seminar was to explore the ways in which the recent developments in formal Hodge theory might be applied to problems in algebraic geometry introduction **Ramification Theoretic Methods in Algebraic Geometry** Shreeram

Shankar Abhyankar,2016-03-02 A classic treatment of ramification theoretic methods in algebraic geometry from the acclaimed Annals of Mathematics Studies series Princeton University Press is proud to have published the Annals of Mathematics Studies since 1940 One of the oldest and most respected series in science publishing it has included many of the most important and influential mathematical works of the twentieth century The series continues this tradition as Princeton University Press publishes the major works of the twenty first century To mark the continued success of the series all books are available in paperback and as ebooks **Annals of Mathematics Studies** Jürgen Moser,1940 **Annals of**

Tyurin,2006-11-14 **Transcendence in Algebra, Combinatorics, Geometry and Number Theory** Alin Bostan,Kilian Raschel,2021-11-02 This proceedings volume gathers together original articles and survey works that originate from presentations given at the conference Transient Transcendence in Transylvania held in Bra ov Romania from May 13th to 17th 2019 The conference gathered international experts from various fields of mathematics and computer science with diverse interests and viewpoints on transcendence The covered topics are related to algebraic and transcendental aspects of special functions and special numbers arising in algebra combinatorics geometry and number theory Besides contributions on key topics from invited speakers this volume also brings selected papers from attendees **Periods and Special Functions in Transcendence** Paula Tretkoff,2017 This book gives an introduction to some central results in transcendental number theory with application to periods and special values of modular and hypergeometric functions It also includes related results on Calabi Yau manifolds Most of the material is based on the author s own research and appears for the first time in book form It is presented with minimal of technical language and no background in number theory is needed In addition except the last chapter all chapters include exercises suitable for graduate students It is a nice book for graduate students and researchers interested in transcendence
