Topics in Geometric Group Theory Pierre de la Harpe, 2000-09-15 In this book Pierre de la Harpe provides a concise and engaging introduction to geometric group theory a new method for studying infinite groups via their intrinsic geometry that has played a major role in mathematics over the past two decades A recognized expert in the field de la Harpe adopts a hands on approach illustrating key concepts with numerous concrete examples The first five chapters present basic combinatorial and geometric group theory in a unique and refreshing way with an emphasis on finitely generated versus finitely presented groups In the final three chapters de la Harpe discusses new material on the growth of groups including a detailed treatment of the Grigorchuk group Most sections are followed by exercises and a list of problems and complements enhancing the book s value for students problems range from slightly more difficult exercises to open research problems in the field An extensive list of references directs readers to more advanced results as well as connections with other fields

Topological Methods in Group Theory Ross Geoghegan, 2007-12-27 This book is about the interplay between algebraic topology and the theory of infinite discrete groups It is a hugely important contribution to the field of topological and geometric group theory and is bound to become a standard reference in the field To keep the length reasonable and the focus clear the author assumes the reader knows or can easily learn the necessary algebra but wants to see the topology done in detail The central subject of the book is the theory of ends Here the author adopts a new algebraic approach which is geometric in spirit

Amenability of Discrete Groups by Examples Kate Juschenko, 2022-06-30 The main topic of the book is amenable groups i e groups on which there exist invariant finitely additive measures It was discovered that the existence or non existence of amenability is responsible for many interesting phenomena such as e g the Banach Tarski Paradox about breaking a sphere into two spheres of the same radius Since then amenability has been actively studied and a number of different approaches resulted in many examples of amenable and non amenable groups In the book the author puts together main approaches to study amenability A novel feature of the book is that the exposition of the material starts with examples which introduce a method rather than illustrating it This allows the reader to quickly move on to meaningful material without learning and remembering a lot of additional definitions and preparatory results those are presented after analyzing the main examples The techniques that are used for proving amenability in this book are mainly a combination of analytic and probabilistic tools with geometric group theory

Ergodic Theory via Joinings Eli Glasner, 2015-01-09 This book introduces modern ergodic theory It emphasizes a new approach that relies on the technique of joining two or more dynamical systems This approach has proved to be fruitful in many recent works and this is the first time that the entire theory is presented from a joining perspective Another new feature of the book is the presentation of basic definitions of ergodic theory in terms of the Koopman unitary representation associated with a dynamical system and the invariant mean on matrix coefficients which

exists for any acting groups amenable or not Accordingly the first part of the book treats the ergodic theory for an action of an arbitrary countable group The second part which deals with entropy theory is confined for the sake of simplicity to the classical case of a single measure preserving transformation on a Lebesgue probability space *Geometrical Themes Inspired by the N-body Problem* Luis Hernández-Lamonedá, Haydeé Herrera, Rafael Herrera, 2018-02-26 Presenting a selection of recent developments in geometrical problems inspired by the N body problem these lecture notes offer a variety of approaches to study them ranging from variational to dynamical while developing new insights making geometrical and topological detours and providing historical references A Guillot's notes aim to describe differential equations in the complex domain motivated by the evolution of N particles moving on the plane subject to the influence of a magnetic field Guillot studies such differential equations using different geometric structures on complex curves in the sense of W Thurston in order to find isochronicity conditions R Montgomery's notes deal with a version of the planar Newtonian three body equation Namely he investigates the problem of whether every free homotopy class is realized by a periodic geodesic The solution involves geometry dynamical systems and the McGehee blow up A novelty of the approach is the use of energy balance in order to motivate the McGehee transformation A Pedroza's notes provide a brief introduction to Lagrangian Floer homology and its relation to the solution of the Arnold conjecture on the minimal number of non degenerate fixed points of a Hamiltonian diffeomorphism

Trends in Set Theory Samuel Coskey, Grigor Sargsyan, 2020-06-18 This volume contains the proceedings of Simon Fest held in honor of Simon Thomas's 60th birthday from September 15-17 2017 at Rutgers University Piscataway New Jersey The topics covered showcase recent advances from a variety of main areas of set theory including descriptive set theory forcing and inner model theory in addition to several applications of set theory including ergodic theory combinatorics and model theory

Cellular Automata and Groups Tullio Ceccherini-Silberstein, Michel Coornaert, 2010-08-24 Cellular automata were introduced in the first half of the last century by John von Neumann who used them as theoretical models for self reproducing machines The authors present a self contained exposition of the theory of cellular automata on groups and explore its deep connections with recent developments in geometric group theory symbolic dynamics and other branches of mathematics and theoretical computer science The topics treated include in particular the Garden of Eden theorem for amenable groups and the Gromov Weiss surjunctivity theorem as well as the solution of the Kaplansky conjecture on the stable finiteness of group rings for sofic groups The volume is entirely self contained with 10 appendices and more than 300 exercises and appeals to a large audience including specialists as well as newcomers in the field It provides a comprehensive account of recent progress in the theory of cellular automata based on the interplay between amenability geometric and combinatorial group theory symbolic dynamics and the algebraic theory of group rings which are treated here for the first time in book form

Colloquium Mathematicum, 2004 *Groups, Geometry and Dynamics*, 2008 Publishes research articles that focus on groups or group actions as well as articles in other areas of

mathematics in which groups or group actions are used as a main tool Covers all topics of modern group theory with preference given to geometric asymptotic and combinatorial group theory dynamics of group actions probabilistic and analytical methods interaction with ergodic theory and operator algebras and other related fields Annales de l'Institut Fourier ,2014 **Bulletin (new Series) of the American Mathematical Society** ,1905 **The Bulletin of Symbolic Logic** ,2008 **Colloquium Publications** Cornelia Druţu,Michael Kapovich,2018 **Groups of Diffeomorphisms** R. C. Penner,2008 This volume is dedicated to Shigeyuki Morita on the occasion of his 60th birthday It consists of selected papers on recent trends and results in the study of various groups of diffeomorphisms including mapping class groups from the point of view of algebraic and differential topology as well as dynamical ones involving foliations and symplectic or contact diffeomorphisms Most of the authors were invited speakers or participants of the International Symposium on Groups of Diffeomorphisms 2006 which was held at the University of Tokyo Komaba in September 2006 The editors believe that the scope of this volume well reflects Morita s mathematical interests and hope this book inspires not only the specialists in these fields but also a wider audience of mathematicians **Far East Journal of Mathematical Sciences** ,2006 **Bulletin of the Belgian Mathematical Society, Simon Stevin** ,2004 **Israel Journal of Mathematics** Mo'atsah ha-le'umit le-mehkar ule-fituah (Israel),2008 **Rendiconti Del Seminario Matematico Della Università Di Padova** Università di Padova.
