Vector Biology, Ecology and Control Peter W. Atkinson, 2009-12-12 Mir S Mulla joined the faculty of the Entomology Department at the University of California Riverside in 1956 only two years after the Riverside campus was established as an independent campus within the University of California system Prior to his appointment Mir received his B S from Cornell University and then moved to the University of California Berkeley to pursue his graduate studies His Ph D from Berkeley awarded in 1955 completed his formal American education which was the purpose of his immigration from his native Kandahar in Afghanistan In his over 50 years at Riverside Mir has made an incalculable impact on vector biology both within the United States and in developing countries throughout the world Within Southern California Mir's basic and applied research led to the rapid and sustainable control of mosquitoes and eye gnats in the Coachella Valley and so directly enabled this region to grow to the thriving large community it is today In 2006 his efforts in facilitating the development of the low desert of southern California were recognized through the dedication of the Mir S Mulla Biological Control Facility by the Coachella Valley Mosquito and Vector Control District His success has been so profound that it remains somewhat cryptic to the many who now reside in visit and enjoy this region of California oblivious to the insect problems that severely restrained development until Mir and his students first applied their expertise many decades ago

Vector Biology, Ecology and Control Peter W Atkinson, 2010-04-18 The control of mosquitoes and other insect vectors of human pathogens in an area wide environmentally and sustainable way is critical to solving global health problems in the developing world but also to industrialized countries that already have in place efficient vector control programs The rapid spread of West Nile virus through the United States provides one example of how even a highly developed country can be relatively powerless against the spread of mosquito borne disease This volume illustrates how the efforts over half a century of a single investigator Mir S Mulla and his students and collaborators have achieved sustainable vector insect control in regions of the world extending from the south western United States to south east Asia These control strategies have been refined over these decades and now are employed in a diversity of ecosystems Increased public awareness of global health and the importance placed on this for the future well being of the entire human population makes the deployment and refinement of these strategies even more timely

Integrated Vector Management G. A. Matthews, 2011-08-17 Diseases transmitted by insects continue to have a major impact on human populations Malaria dengue onchocerciasis sleeping sickness and leishmaniasis all adversely affect man Malaria is one of the most important causes of child mortality and reduces economic development in many countries with agricultural productivity often greatly reduced as many vectors are active in the wet season favourable for crop production Vector control is crucial to reduce the extent to which drugs are needed to treat the diseases as the parasite can become resistant or the drugs are often too expensive for those living in rural areas and urban slums most affected by these diseases Chemical control of vectors is often the only method that can reduce vector populations in a disease epidemic but

with vectors developing resistance to insecticides there is increasing awareness that a single control method is often insufficient and also that chemical control must be integrated where possible with other control measures In Integrated Vector Management Graham Matthews covers the main chemical methods of vector control including the use of indoor residual spraying space treatments the use of treated bed nets and larviciding but also stresses the importance of drainage schemes and improvement of houses to prevent access of indoor vectors techniques that have largely been responsible for reducing the risk of vector borne diseases in Europe and the USA This book combines practical information from successful vector control programmes including early use of DDT and recent research into a vital resource for all those now involved in combating insect vector borne diseases Integrated Vector Management is an essential tool not only for medical entomologists and those directly involved in government health departments but also for all those who provide the skills and management needed to operate successful area wide vector management programmes Libraries in all universities and research establishments world wide where biological sciences medicine and agriculture are studied and taught should have multiple copies of this important book

Population Biology of Vector-Borne Diseases John M. Drake,Michael Bonsall,Michael R. Strand,Michael Strand,2021 Population Biology of Vector Borne Diseases is the first

comprehensive survey of this rapidly developing field The chapter topics provide an up to date presentation of classical concepts reviews of emerging trends synthesis of existing knowledge and a prospective agenda for future research The contributions offer authoritative and international perspectives from leading thinkers in the field The dynamics of vector borne diseases are far more intrinsically ecological compared with their directly transmitted equivalents The environmental dependence of ectotherm vectors means that vector borne pathogens are acutely sensitive to changing environmental conditions Although perennially important vector borne diseases such as malaria and dengue have deeply informed our understanding of vector borne diseases recent emerging viruses such as West Nile virus Chikungunya virus and Zika virus have generated new scientific questions and practical problems The study of vector borne disease has been a particularly rich source of ecological questions while ecological theory has provided the conceptual tools for thinking about their evolution transmission and spatial extent Population Biology of Vector Borne Diseases is an advanced textbook suitable for graduate level students taking courses in vector biology population ecology evolutionary ecology disease ecology medical entomology viral ecology evolution and parasitology as well as providing a key reference for researchers across these fields
