What is Psychology About? The Philosophical Foundations of its Subject-Matter Alexander Nicolai Wendt, 2025-03-25 This book examines the subject matter of psychology against the background of the philosophical problem of reality It locates the core of the issue in the dualistic conception of reality which it argues has left psychologists with a conceptually constrained choice of subject matter for instance between experience and behavior not to mention philosophically incomplete ways of discussing its possible subject matters By drawing on the work of philosophers and philosophically informed psychologists the book seeks to explain and advance the long standing debate by introducing the under utilized perspective of ideal realism The historical origins and trajectory of ideal realism are recovered from the late 18th century through the early 20th century The exposition of this tradition especially in the little known German Realpsychologie provides theoretical psychology with a philosophically founded understanding of its subject matter

**Phenomenological Psychology as Rigorous Science** Alexander Nicolai Wendt, 2024-06-05 Experimental psychology depends on theoretical and methodological foundations Addressing these foundations is not always trivial and requires a shift in epistemological perspective Phenomenology can provide a framework that helps to discuss the possibilities and challenges of the discipline This book provides a historical overview of the phenomenological movement as well as a systematic introduction to the research approaches that are known as phenomenological psychology The central claim is that the phenomenological discourse can increase the conceptual descriptive and methodological rigor in psychology The purpose of the book is to facilitate the dialogue between phenomenology and cognitive sciences It is meant to be a guide for interested scholars but also offers new ideas for experts in the field

**Critical Debates on Quantitative Psychology and Measurement: Revived and Novel Perspectives on Fundamental Problems** Jana Uher, Jan Ketil Arnulf, Barbara Hanfstingl, 2025-11-14 Psychology's continued crises in replicability validity generalisability and thus confidence in its findings are currently attributed primarily to questionable research practices QRPs e.g. p-hacking HARKing cherry picking Popular pertinent debates therefore centre on proposals for remedying inappropriate method applications e.g. larger samples robust statistics pre-registration replication Replicable non-random effects of psychological interventions and differentiations between individuals are essential for applied purposes But current approaches to replicability validity and psychometric modelling are merely pragmatic providing evidence of just utility to discriminate well and consistently between cases and in ways considered important e.g. social relevance relations to future outcomes Yet without understanding the study phenomena in themselves e.g. individuals' experience beliefs thought processes and without elaborating how relevant features of them can be made amenable to quantitative investigation and if at all the quantity objection the actual causes of replicable quantitative findings cannot be explored These causes however may be completely unrelated to the actual study phenomena e.g. methodomorphism This concerns in particular the attributes and latent constructs studied in psychology given that these are theoretical and statistical concepts that are attributed and

construed as means of investigation and that only refer to but do not constitute the actual study phenomena in themselves We believe the currently debated deficiencies of quantitative practices in psychology are just surface symptoms whereas fundamental problems e g the inappropriateness of statistical assumptions for psychical phenomena and the actual root causes underlying psychology s crises and disputes around its scientific status are still hardly addressed With this Research Topic we want to give new impetus to critical debates on the epistemological and methodological foundations of quantitative methods and measurement in psychology including problems long known but still hardly considered Examples are The behavioural and psychical phenomena s non ergodicity rendering sample level statistics uninformative about individual level phenomena Psychometricians alignment of results to statistical theories rather than to features of the study phenomena biasing inferences on the latter Ideas that laypeople s intuitive judgements could reveal quantitative structures in complex largely unobservable phenomena The still unsupported claim that psychical phenomena could have quantitative properties at all and could thus be measured The fact that psychometric structures shown for verbal item judgements can also be produced by semantic and Artificial Intelligence AI algorithms e g ChatGPT without collecting any empirical data Still most quantitative psychologists seem fairly unconcerned about the strong reliance on everyday language e g in ratings scales and the imprecise concepts of psychological measurement perhaps because their consequences do not become as straightforwardly apparent as in other disciplines such as in physics chemistry and medicine where imprecise measurement can entail the collapse of buildings chemical explosions or drug overdoses But where does the loose jargon around measurement variables and psychometrics go seriously wrong in psychology These and further contradictions problems and challenges underlying established quantitative practices in psychology must be addressed to tackle the discipline s continued crises and to develop new approaches that are needed to advance psychology as a science We invite from all fields contributions that critically explore and open up new perspectives on the foundations of quantification and measurement in psychology including perspectives still hardly considered e g qualitative mathematics complex dynamic systems fuzzy systems modelling machine learning We are also interested in methods for generating quantitative data either executed by persons e g time based observations computer based coding or by automated technology e g ecological momentary monitoring life logging reality mining However other than commonly done we are explicitly not seeking proposals for improving specific techniques of data analysis e g statistical or latent variable models Instead our focus is on making explicit and scrutinising the implicitly underlying rationales and fundamental principles thus the theory philosophy and methodology on which quantitative research in psychology currently is or should be built in the future This also includes critical views on whether or not quantitative investigations are meaningful at all for a science exploring behaviour mind and society and thus also contributions to the psychology sociology and philosophy of science in this field

Dettweiler, 2023-03-31      Experimental Psychology Davood Gozli, Jaan Valsiner, 2022-11-28 This work brings together different perspectives on psychological methods and particularly methods involving experimentation To encourage a reflective use of research methods the authors illuminate the historical philosophical and scientific dimensions of methodology providing both defenses and criticisms of experimental psychology The primary audience of the work are students and researchers in psychological and behavioral sciences who have an interest in methodology      **The challenges of consciousness research in light of the variations of conscious experience** Christopher Gutland, Kelin Li, Marcela Venebra, Sucharit Katyal, Alexander Nicolai Wendt, 2024-02-29      *Theoretische Psychologie* Jochen Fahrenberg, 2015

Abstract Eine Theoretische Psychologie nach dem Vorbild der Theoretischen Biologie oder Physik existiert nicht In der Psychologie ist die Vielfalt der Theorien auch der Wissenschaftstheorien unübersehbar Die Recherchen zu den herausragenden Kontroversen erfolgen auf drei Ebenen 1 Die hauptsächlichen Strömungen und Richtungen der Psychologie werden hinsichtlich ihrer Postulate und Prinzipien d.h. den Positionen der Erkenntnis- und Wissenschaftstheorie untersucht Nach Kant Herbart und Fechner werden hauptsächlich die Beiträge bedeutender Psychologen der deutschsprachigen Psychologie zwischen 1874 Wundt Brentano Freud und dem Zweiten Weltkrieg analysiert Darüber hinaus werden Aspekte und Beiträge der neueren Diskussion berücksichtigt 2 In den eigentlichen Diskussionen über Krise und Erneuerung der Psychologie treten typische Kontroversen hervor und führen zu soziologischen und psychologischen Fragen 3 Inhaltsanalytische und scientometrische Methoden sowie Reanalysen von repräsentativen Umfragen geben Hinweise wie verbreitet bestimmte Kontroversen und Trends sind In einer Systematik der Schlüsselkontroversen sind zu unterscheiden ontologische und metaphysische Kontroversen erkenntnistheoretische Kontroversen einschließlich Kategorien- und Kategorienfehler wissenschaftstheoretische und methodologische Kontroversen Außerdem gibt es in der Forschung und Praxis Auseinandersetzungen über adäquate Strategien und die Gewichtung von Kriterien und Effekten Die Untersuchung zeigt dass eine konsistente Grundlage für eine Meta-Theorie fehlt und auch nicht zu erwarten ist Demnach besteht die Aufgabe der Theoretischen Psychologie darin die Gründe darzulegen weshalb eine Vereinheitlichung unmöglich ist Die Systematik der Schlüsselkontroversen kann zum Diskurs über die kategorial verschiedenen Bezugssysteme und ihre Meta-Relationen sowie zum notwendigen Perspektivenwechsel beitragen Die Auffassung der Theoretischen Psychologie als Systematik und Diskussion der Schlüsselkontroversen führt konsequent zu Anforderungen an die Methodologie an die Didaktik und die wissenschaftliche Ausbildung Das Buch schließt an die vorausgegangenen Bücher an Zur Kategorienlehre der Psychologie 2013 und Wilhelm Wundt 2011      *Philosophische Psychologie um 1900* Thomas Kessel, 2019-11-20 Dieser Band stellt die eigentlichen Mischungsverhältnisse natur- und geisteswissenschaftlicher Perspektiven im Feld der philosophischen Psychologien um 1900 ins Zentrum Diese Konzeptionen die den engen Rahmen des Psychologismus streiten überschreiten und ihn gleichwohl kontextualisieren werden durch Beiträge zu Franz Brentano Wilhelm Dilthey Carl Stumpf Theodor Lipps Wilhelm Wundt
