Sustainable Materials and Technologies in VLSI and Information Processing Shashi Kant Dargar, Shilpi Birla, Abha Dargar, Avtar Singh, D. Ganeshaperumal, 2025-05-23 The International Conference on Sustainable Materials and Technologies in VLSI and Information Processing aimed to converge advancements in semiconductor technology with sustainable practices addressing the critical need for eco consciousness in the field of Very Large Scale Integration VLSI and Information Processing The primary purpose of the conference was to explore innovative materials manufacturing processes

and design methodologies that minimize environmental impact while optimizing performance and functionality in electronic devices. Key features of the conference included interdisciplinary discussions on sustainable materials such as biodegradable polymers, low power semiconductor materials and recyclable electronic components. Additionally, it focused on emerging technologies like quantum computing, neuromorphic computing and photonic integrated circuits, exploring their potential contributions to sustainability in VLSI and information processing. The intended audience comprised of researchers, scientists, engineers and industry professionals from academia, government and private sectors involved in semiconductor technology, materials science, environmental sustainability and information processing. What set this conference apart was its unique emphasis on sustainability within the realm of VLSI and information processing. While there are conferences focusing on either semiconductor technology or sustainability separately, this conference bridged the gap between the two, fostering discussions and collaborations that pave the way for greener and more efficient electronic devices and systems.
